Climate and Human History

1. Climate and climate history
2. The Ice Age
3. Farming and City States
4. Rise and Fall of the Roman Empire
5. Tang and Maya in the 10th century
6. Mediaeval Optimum and Little Ice Age
7. El Niño through the ages
8. Miscellaneous topics
9. Current and future changes
10. Summary and re-cap

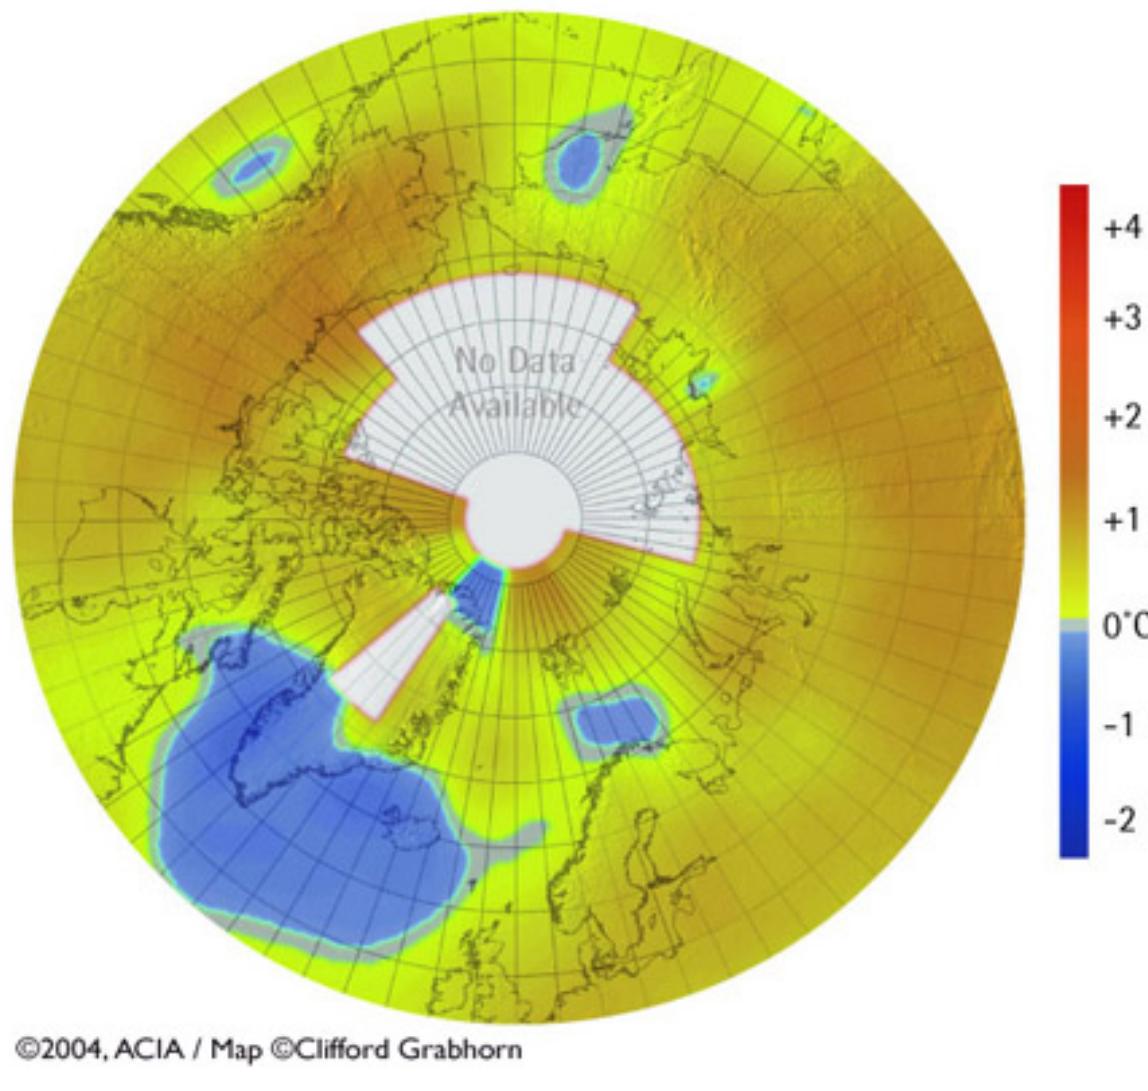

About me

Fieldwork in Sweden, Aug 2007

Arctic Change Observed 1954-2003

About you

- Why did you decide to come to this course?
- Are there any civilisations or periods that you are particularly interested in?

Climate and Climate History

Outline:

- The Climate System
- Methods for Reconstructing Past Climates
- Climate History

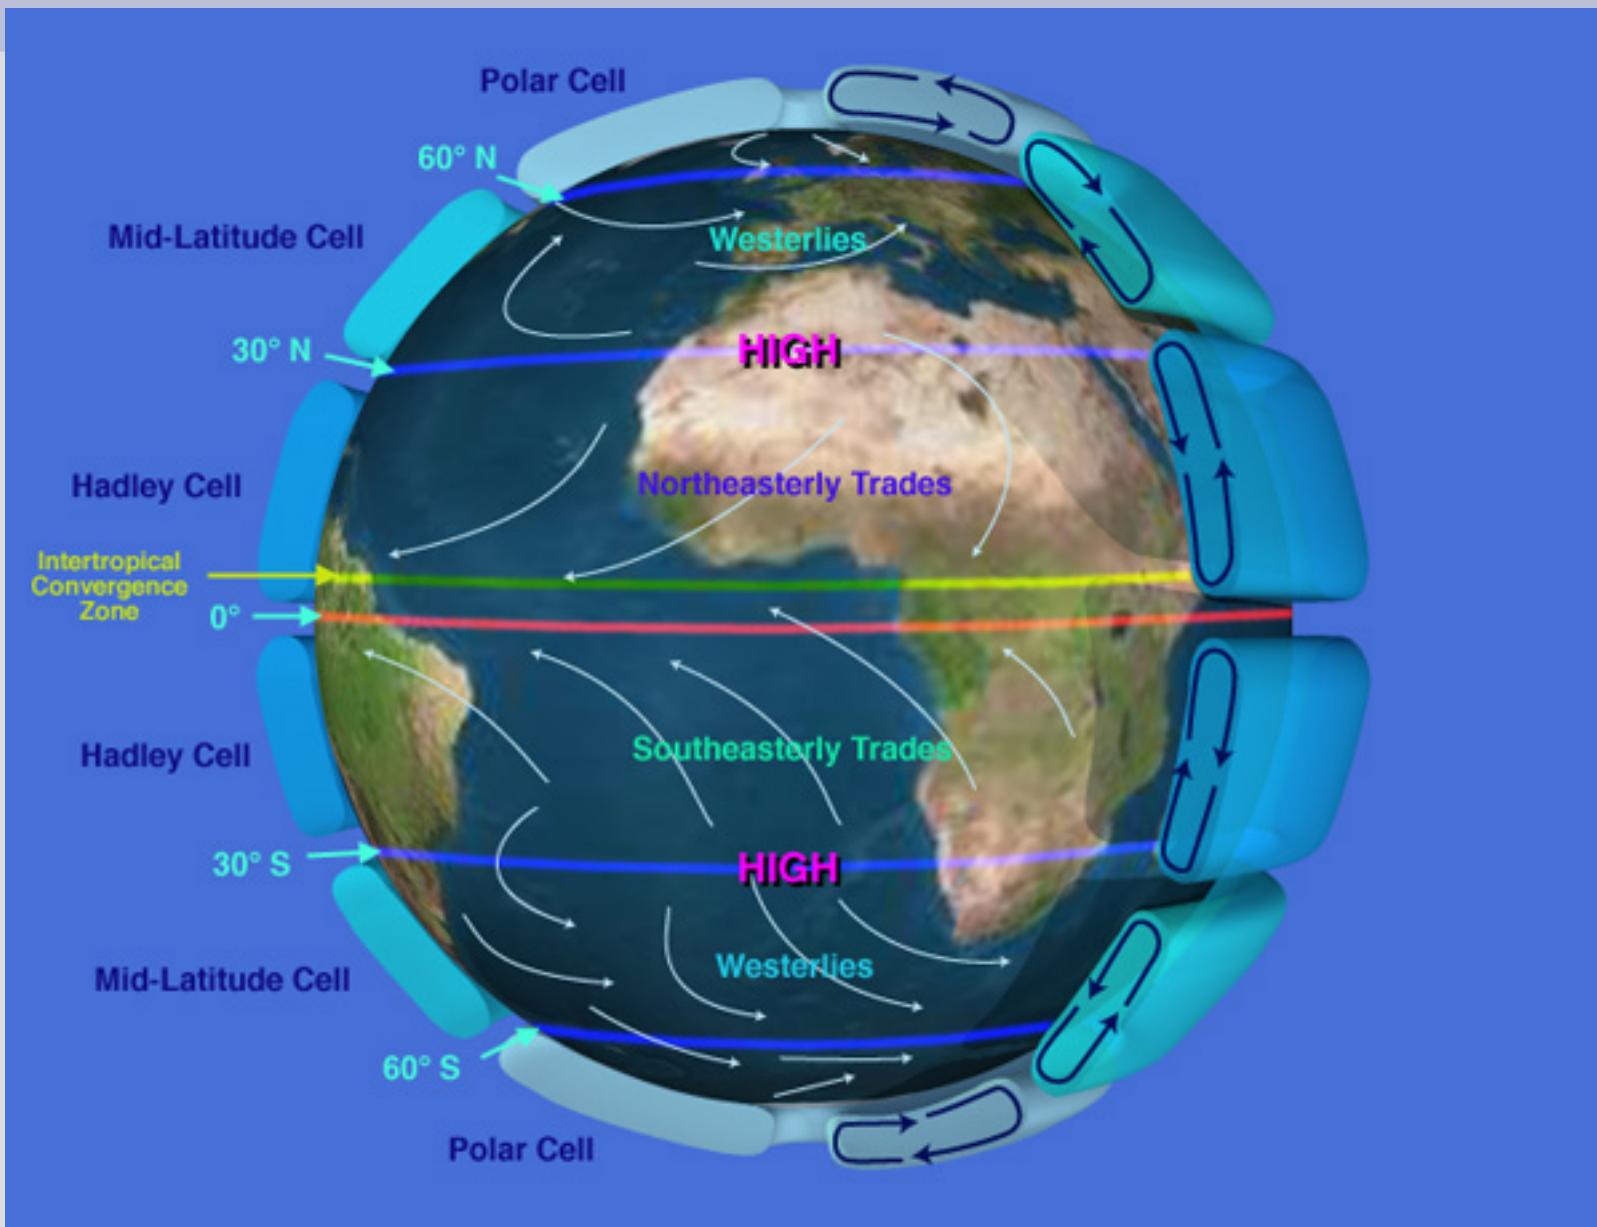

What is Climate?

“average weather”:

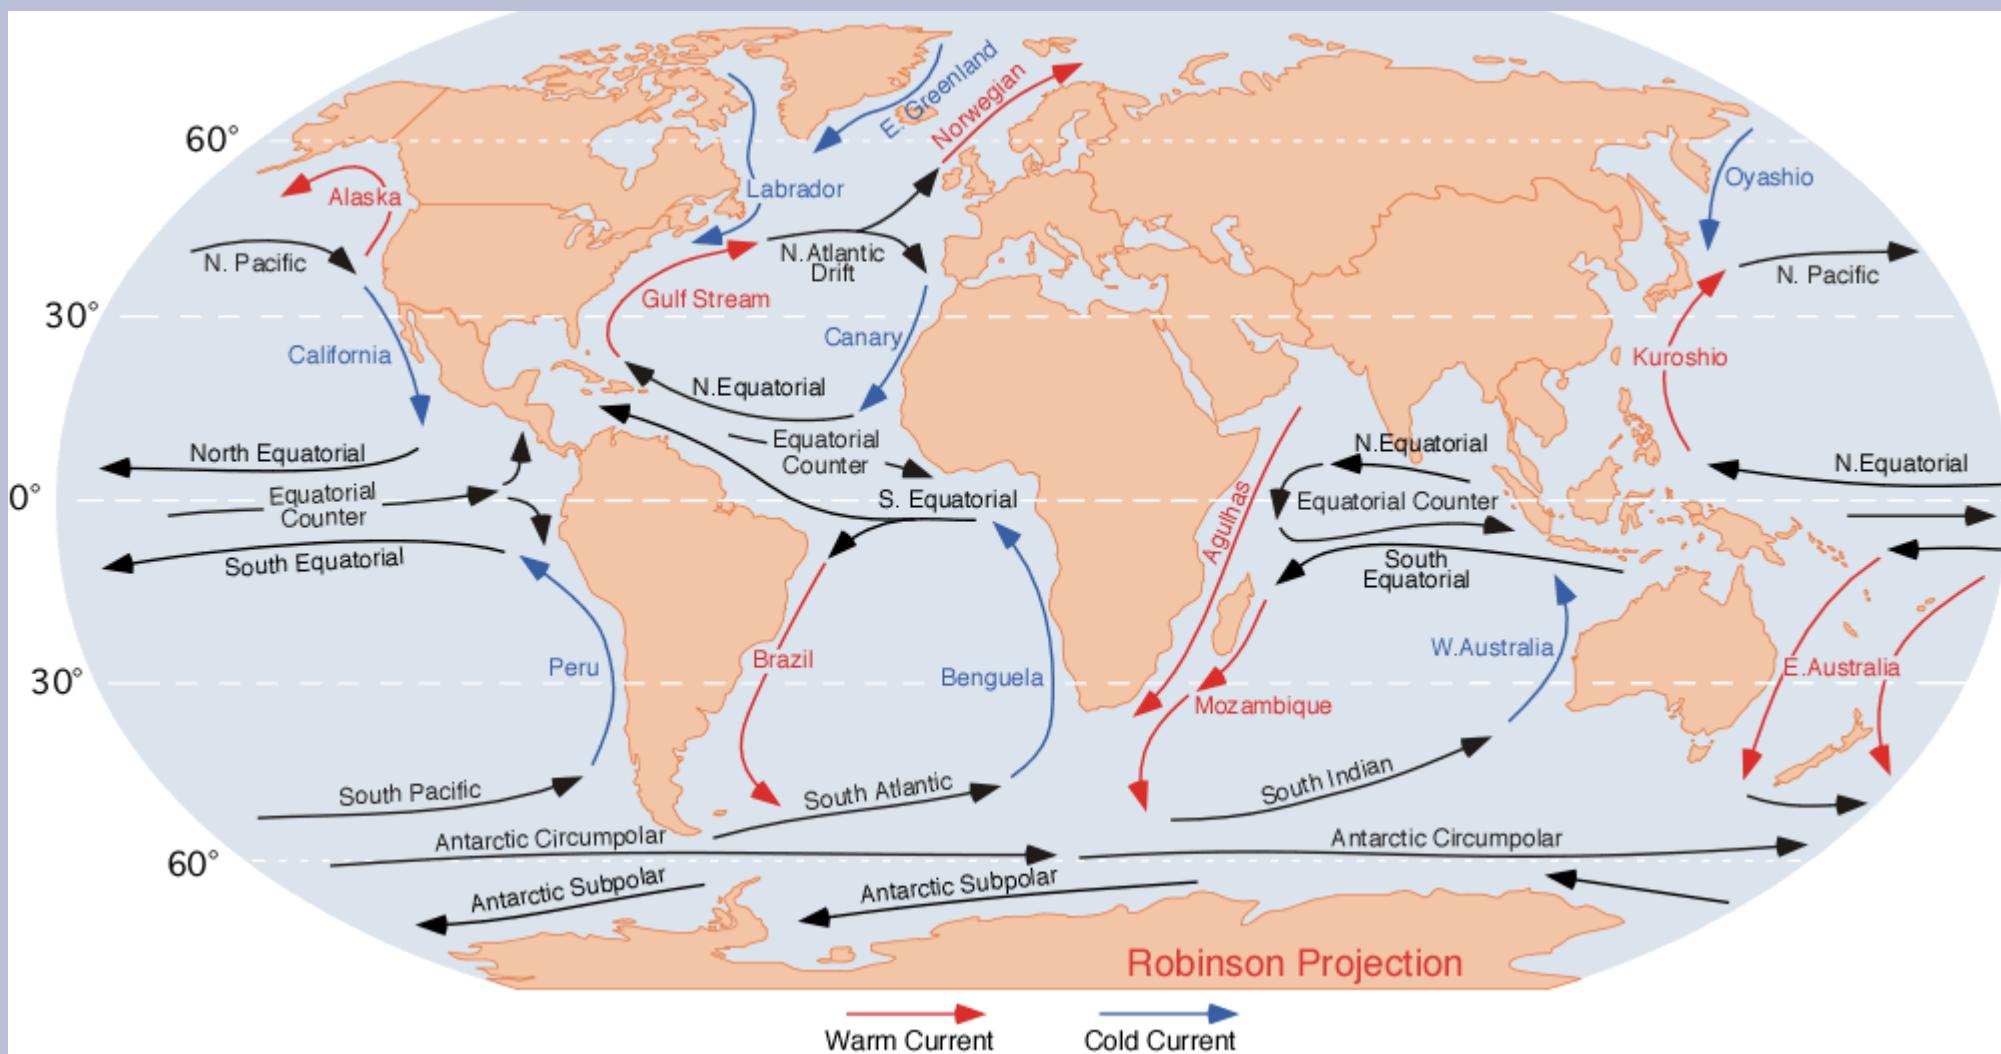

“Climate represents (...) the accumulation of daily and seasonal weather events (the average range of weather) over a long period of time.”

[Ahrens (2002): Meteorology Today]

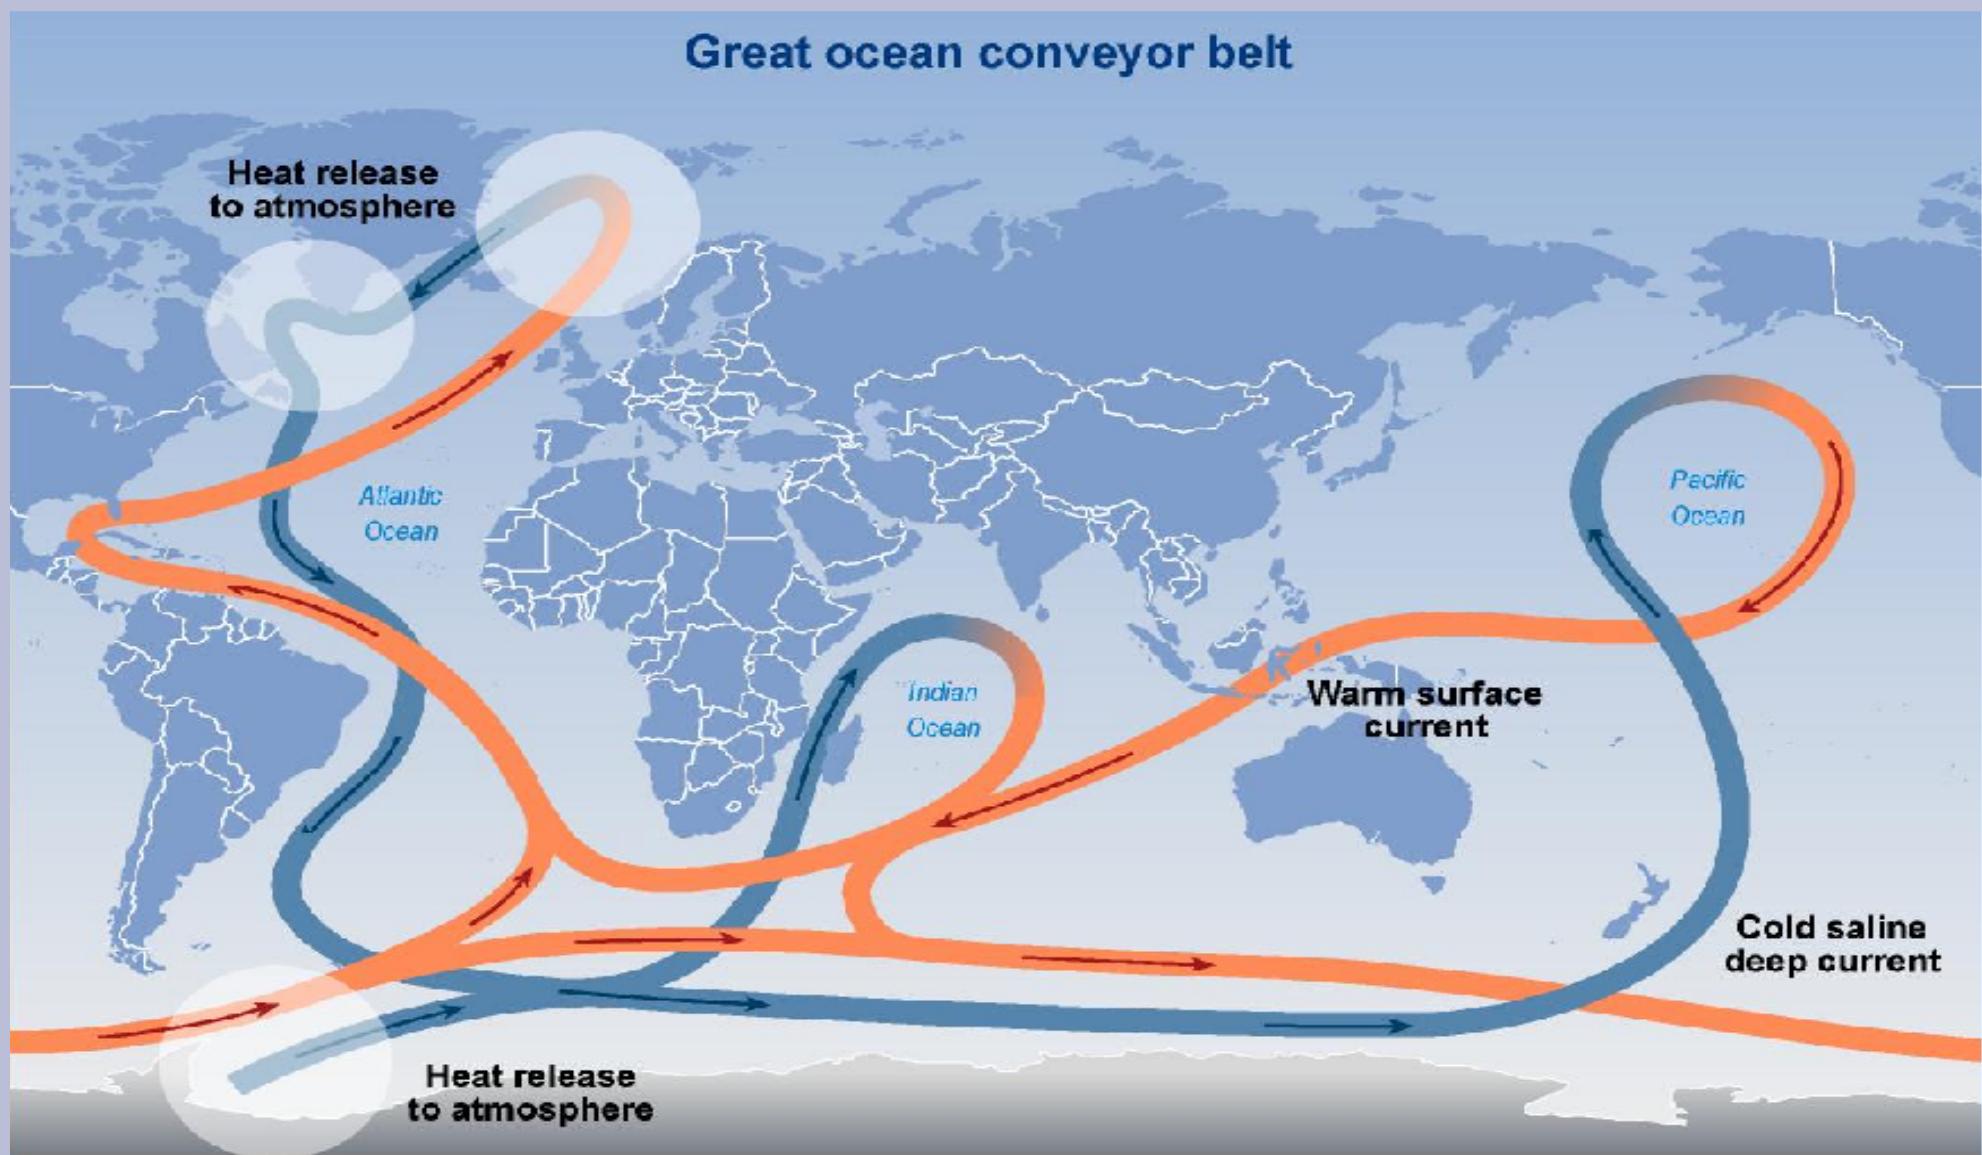

Atmospheric Circulation

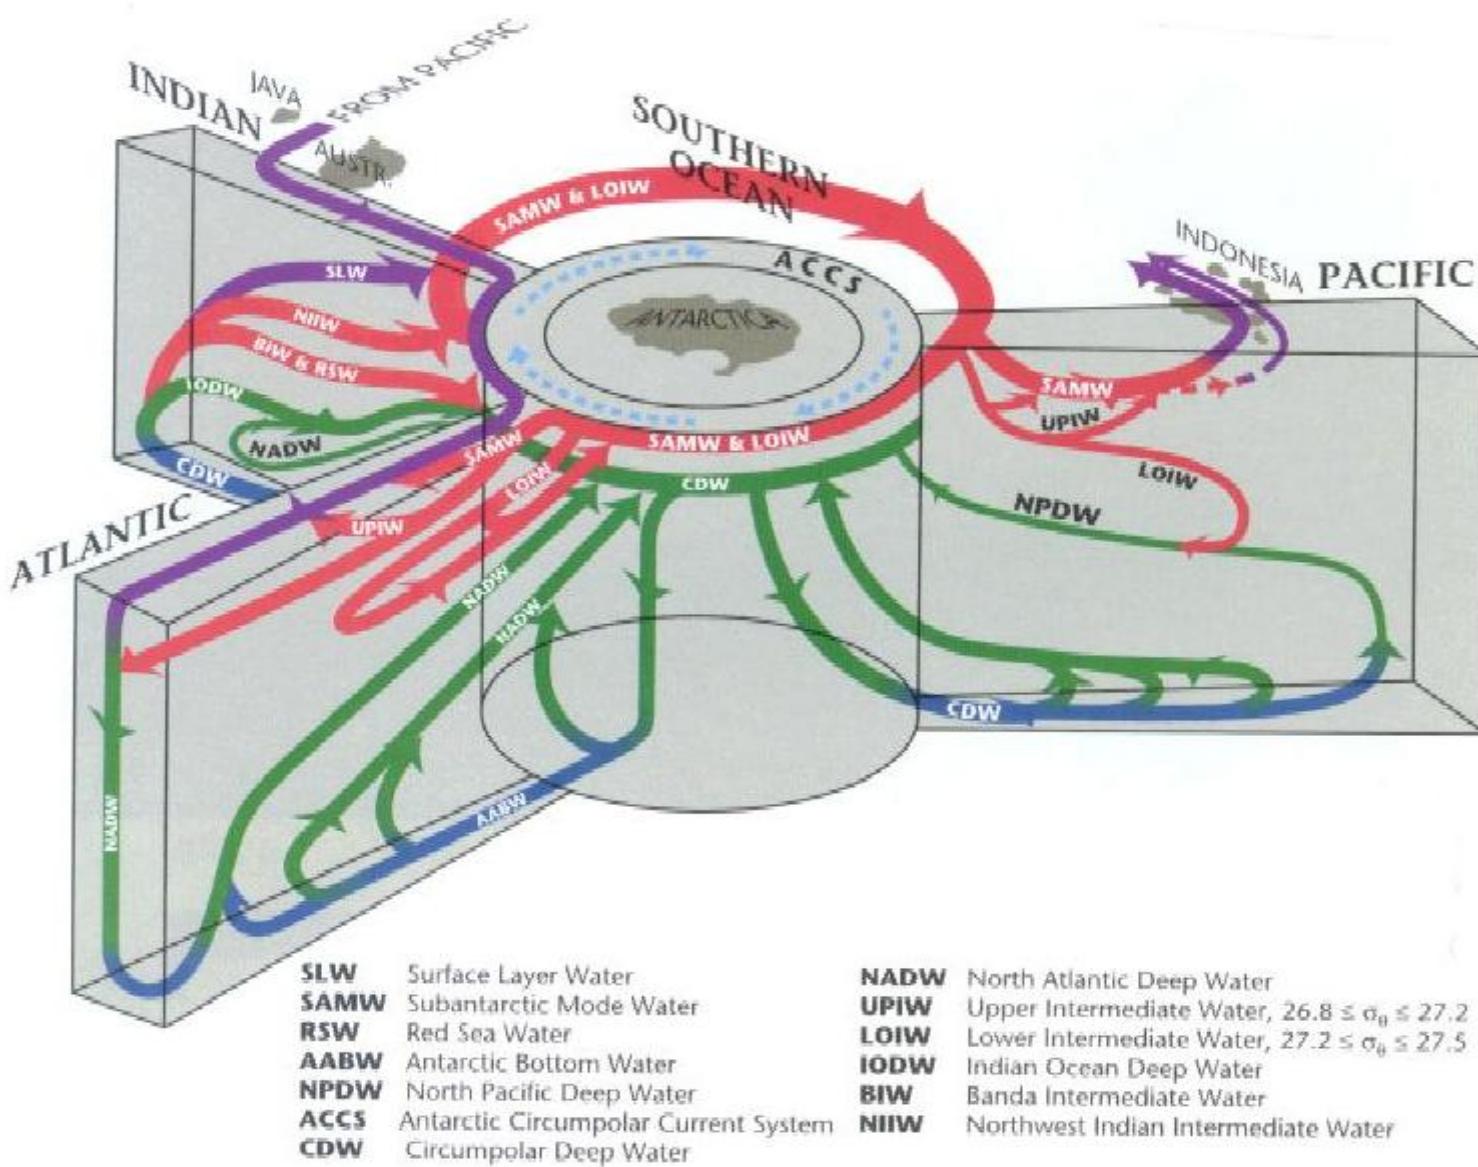

Ocean currents

Thermohaline Circulation

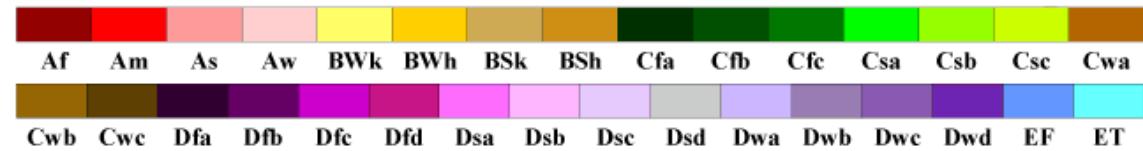

A different view of the thermohaline circulation

World Map of Köppen–Geiger Climate Classification

updated with CRU TS 2.1 temperature and VASClimo v1.1 precipitation data 1951 to 2000

Main climates

- A: equatorial
- B: arid
- C: warm temperate
- D: snow
- E: polar

Precipitation

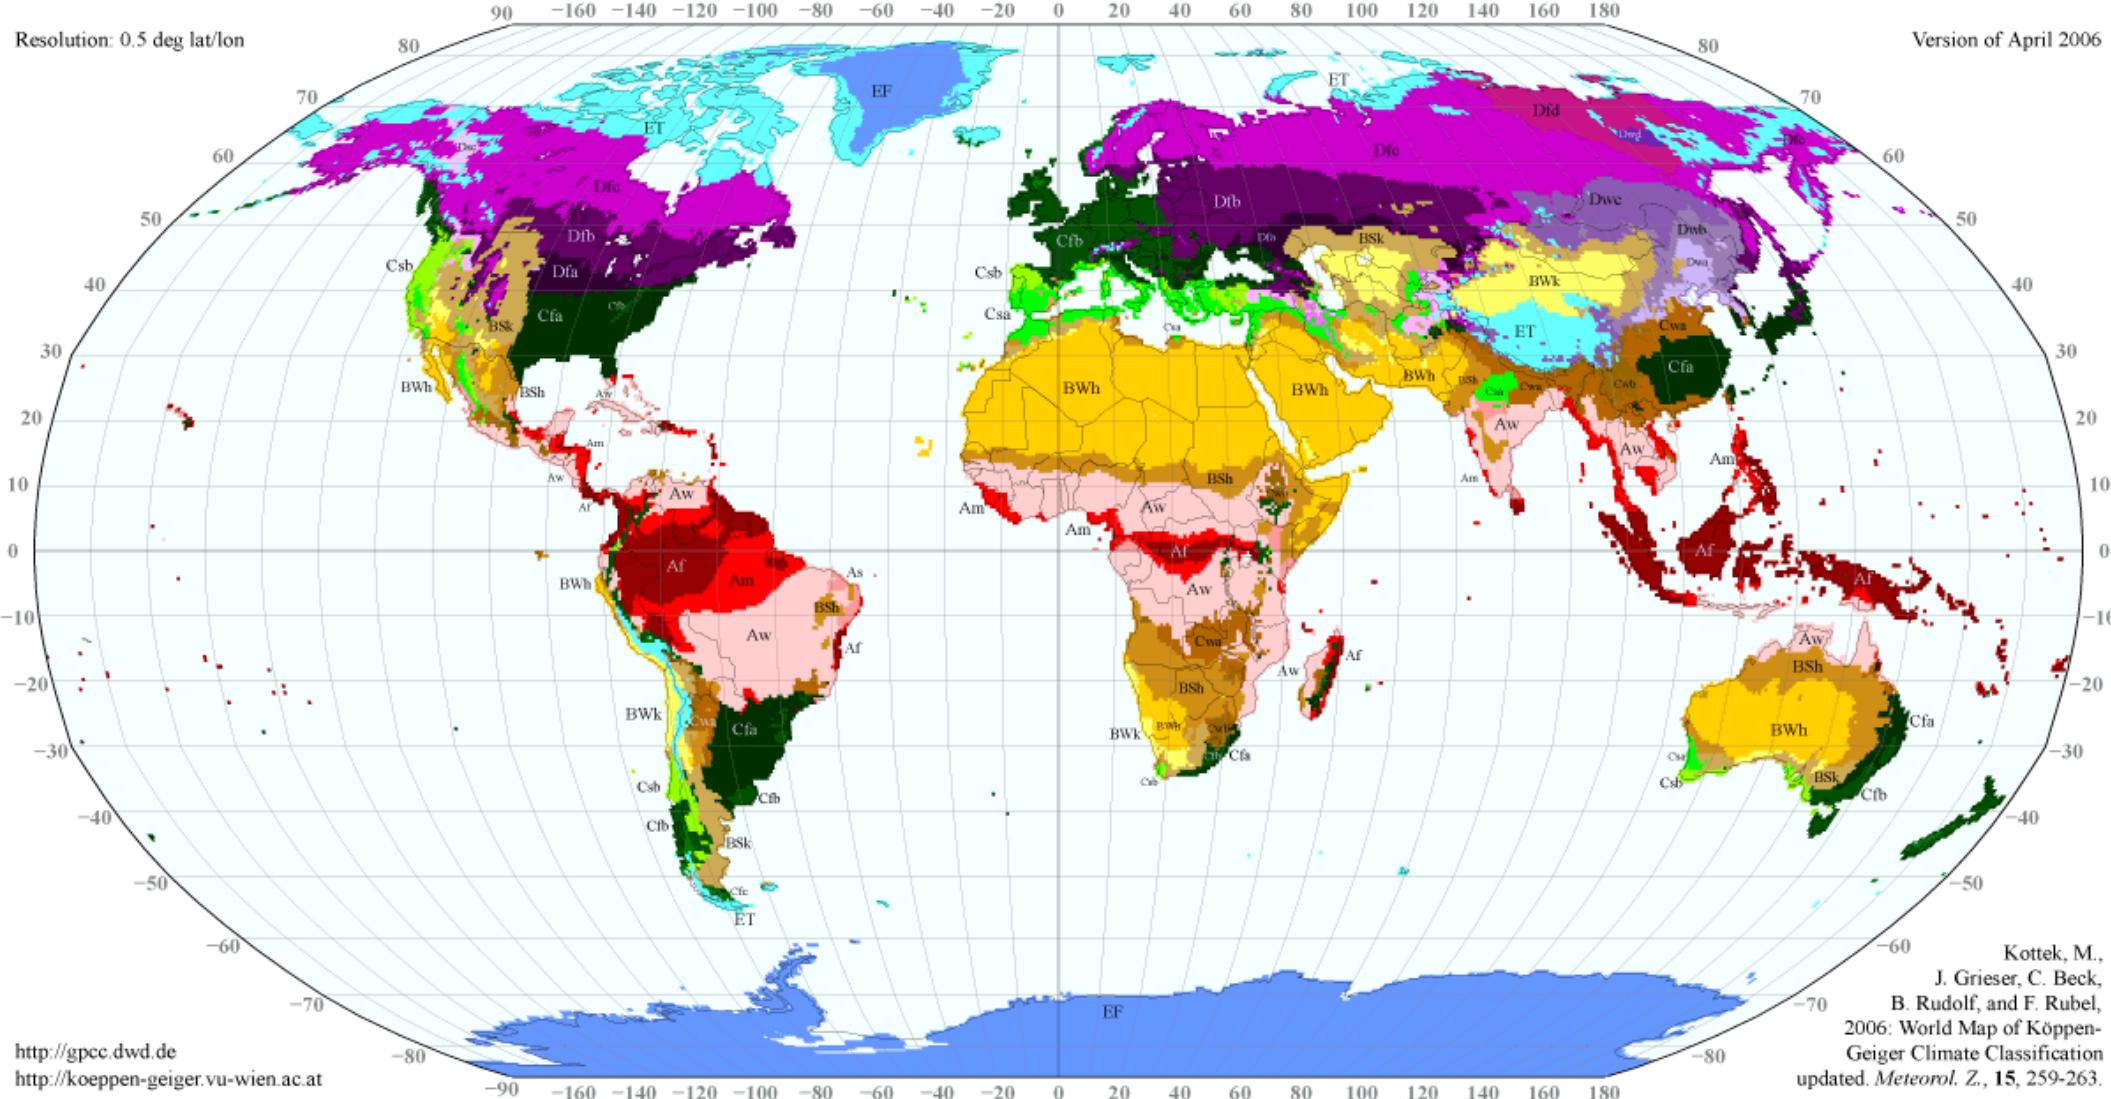

- W: desert
- S: steppe
- f: fully humid
- s: summer dry
- w: winter dry
- m: monsoonal

Temperature

- | | |
|--------------------------|-----------------|
| h: hot arid | F: polar frost |
| k: cold arid | T: polar tundra |
| a: hot summer | |
| b: warm summer | |
| c: cool summer | |
| d: extremely continental | |

Resolution: 0.5 deg lat/lon

Version of April 2006

A: equatorial: all months above 18°C

B: arid

C: warm temperate: coldest month > -3°C

D: snow: coldest month < -3°, warmest > 10°C

E: polar: warmest month < 10°C

W: desert

S: steppe

f: fully humid

s: summer dry

w: winter dry

h: hot arid

k: cold arid

a: hot summer

b: warm summer

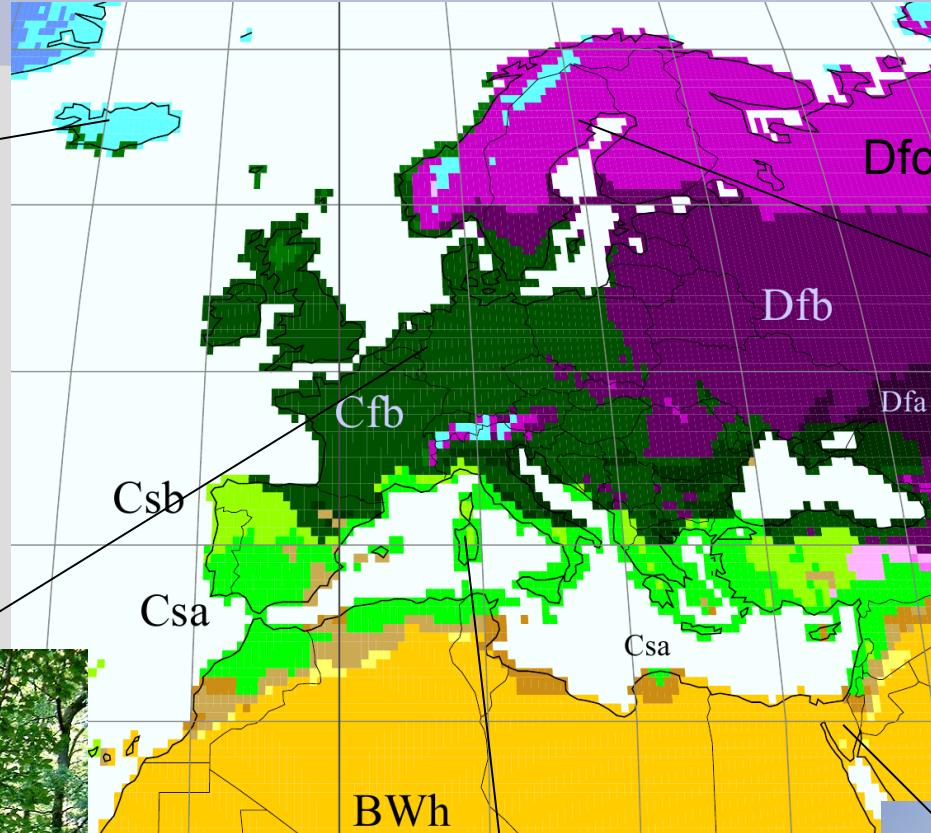

c: cool summer

d: extreme continental

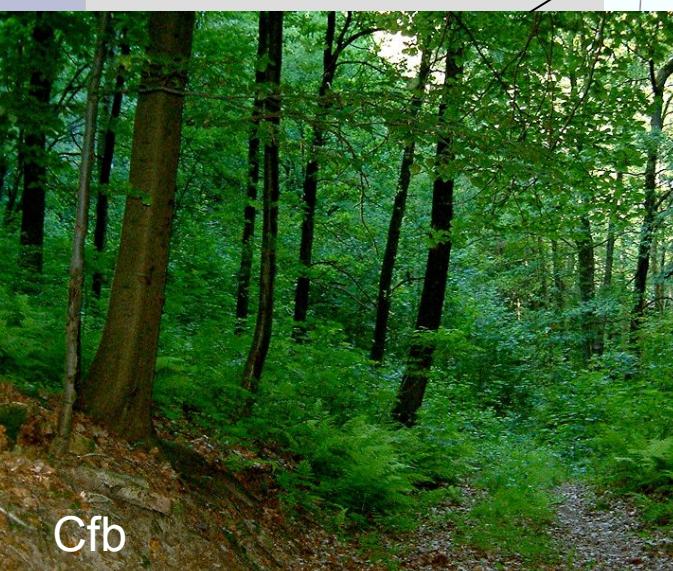

F: polar frost

T: polar tundra

ET: tundra

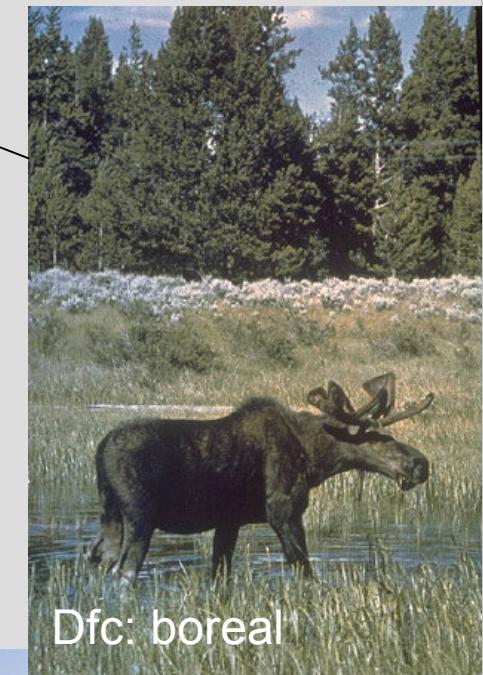

Csa: mediterranean

Cfb

BWh: desert

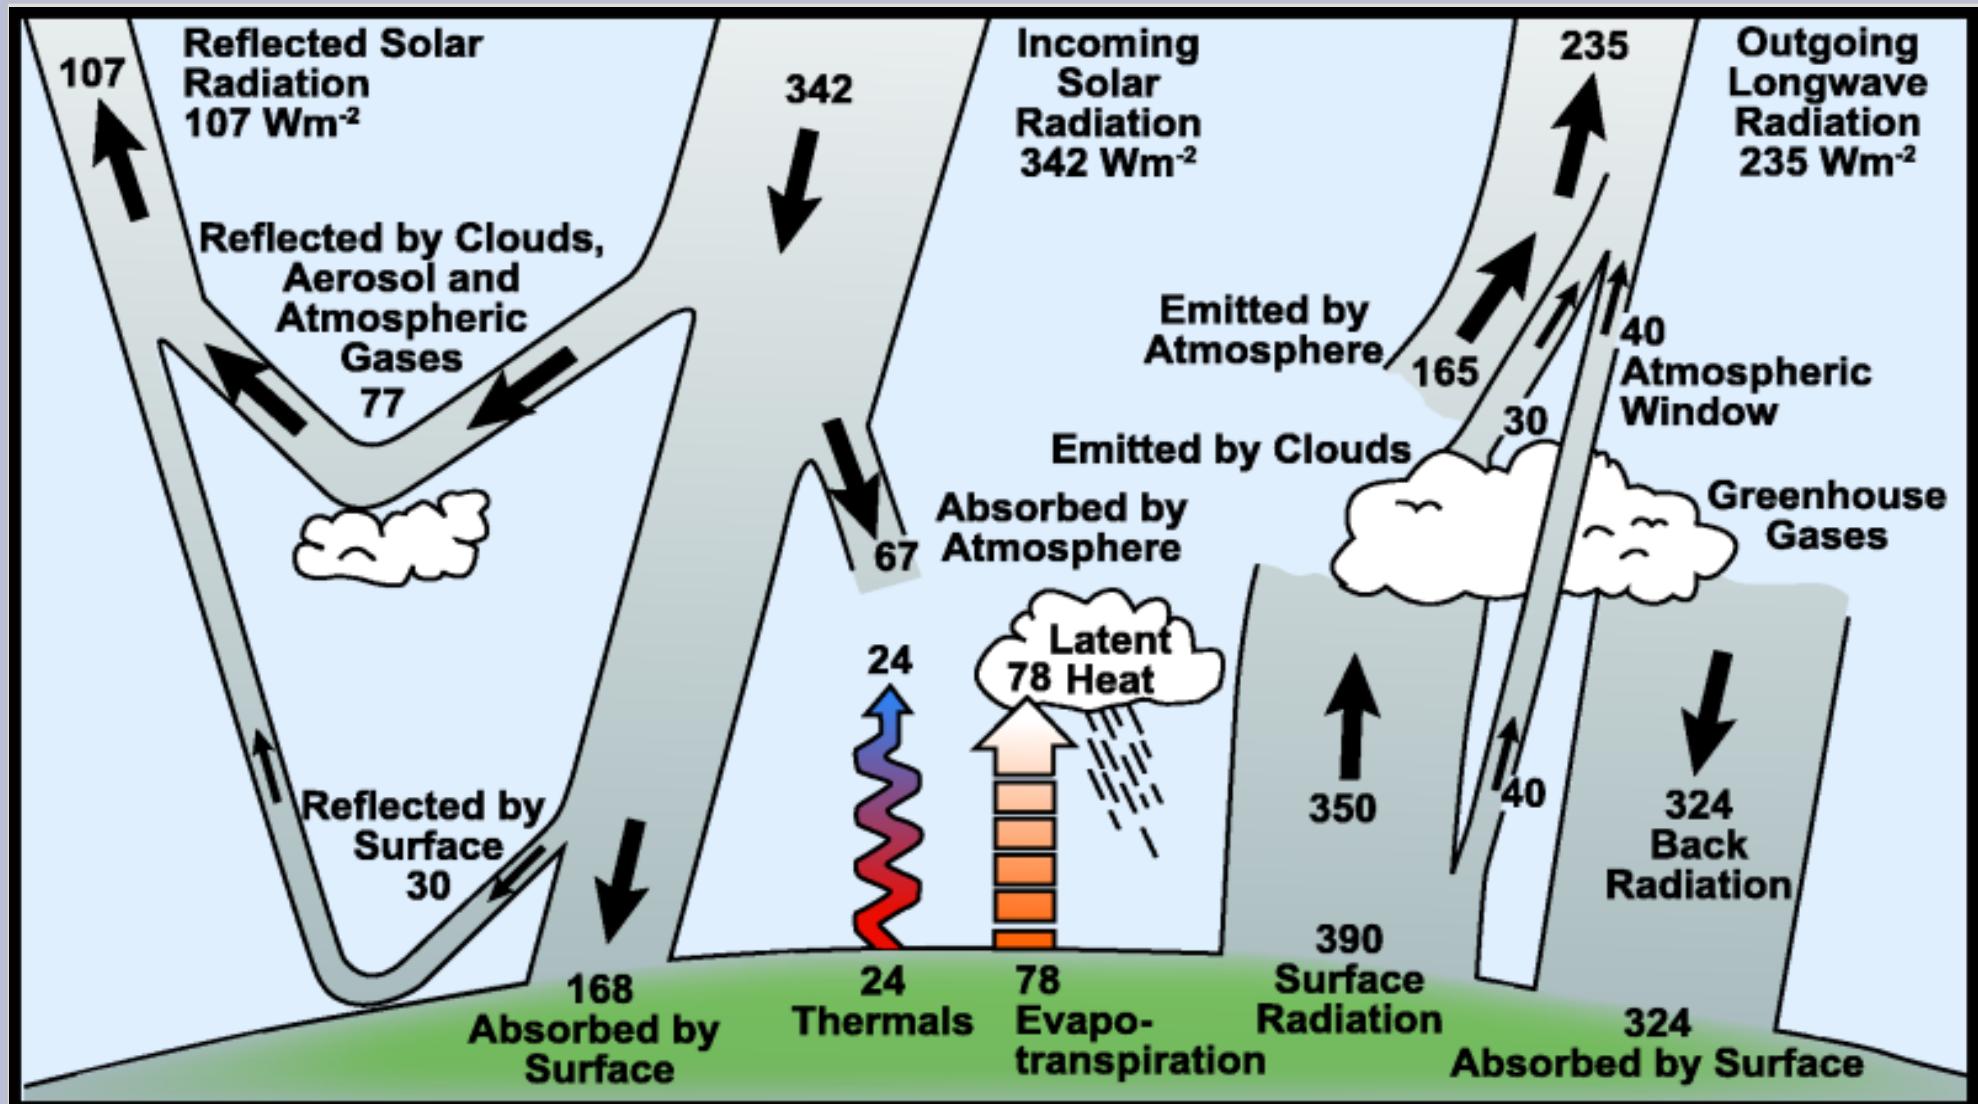

Dfc: boreal

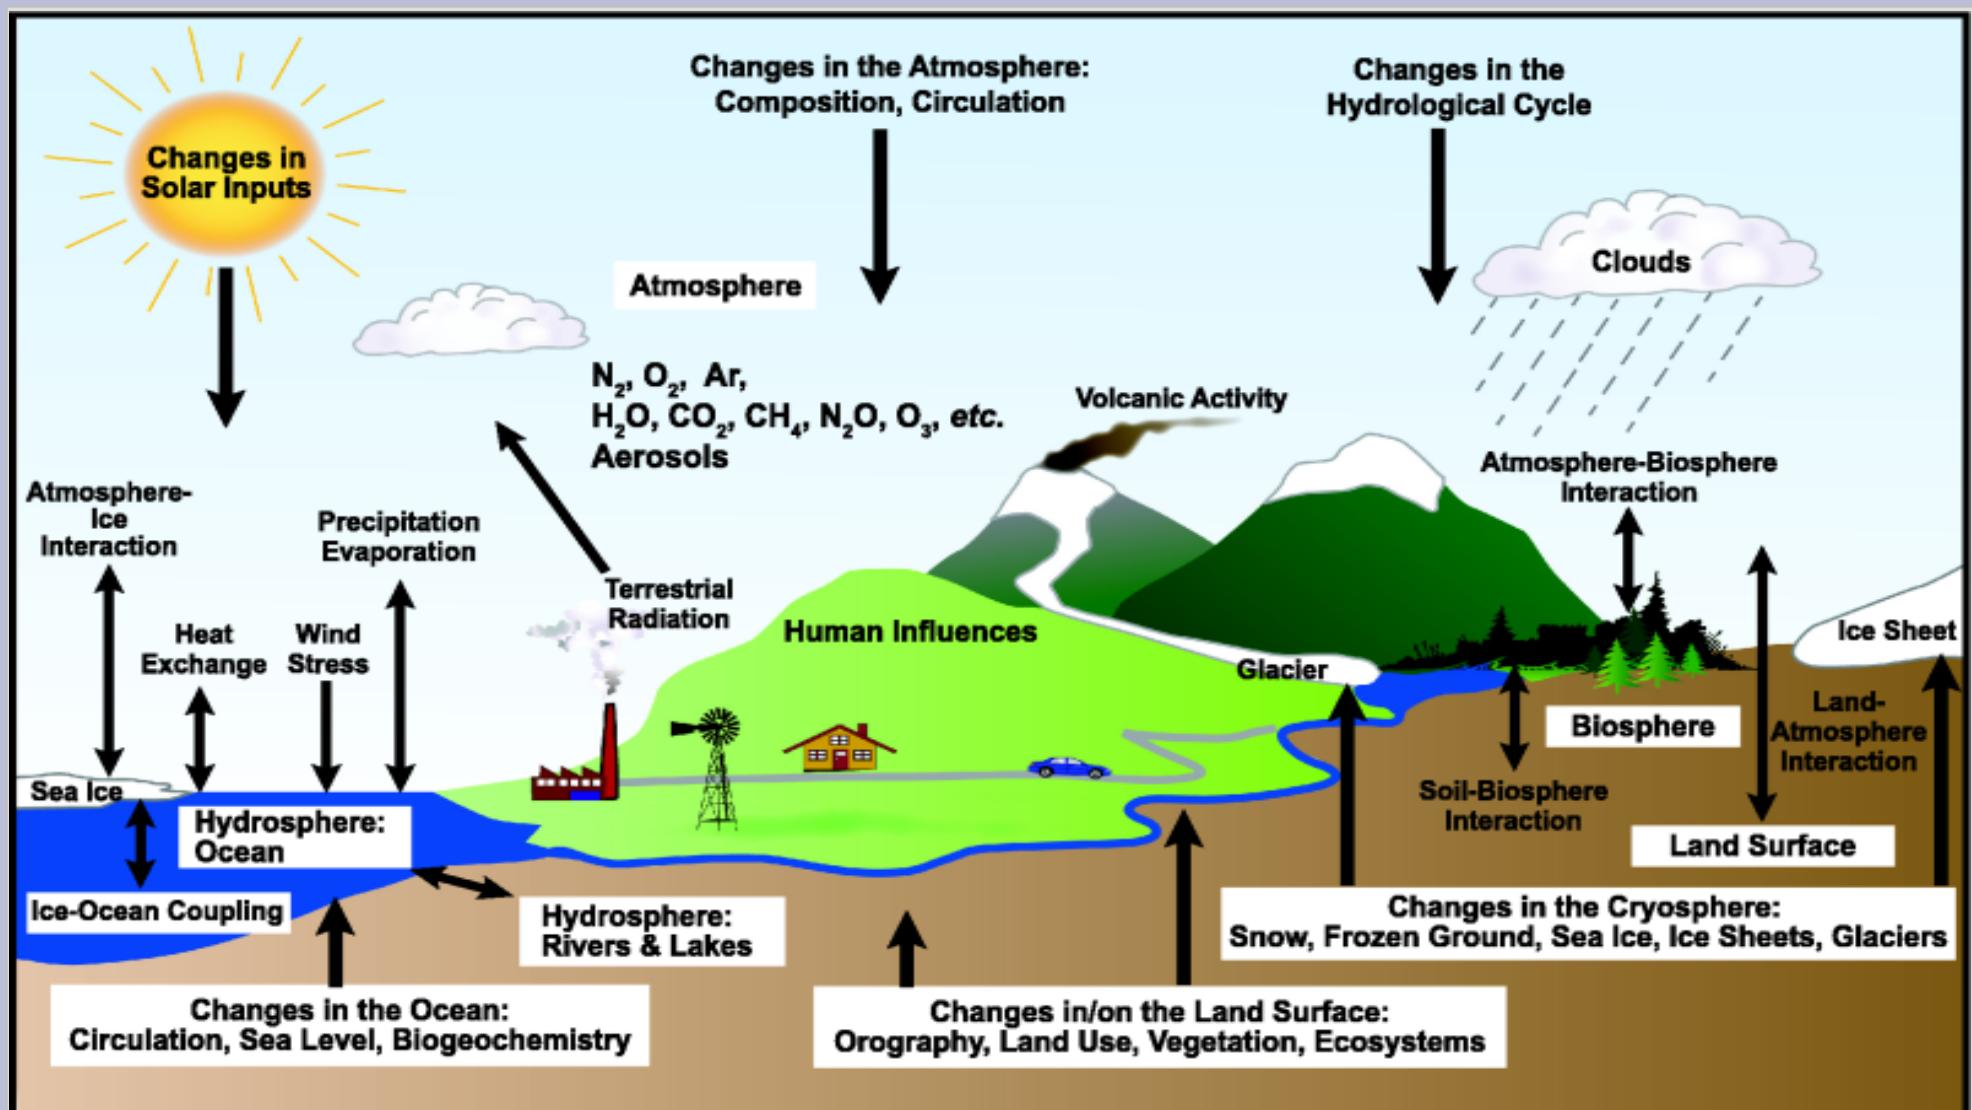

BWh: desert

Energy Balance in the Atmosphere

Factors affecting climate

Methods for Climate Reconstruction

- Can you think of a method to reconstruct the climate of the past?
- What is the temporal range? How far back in time does this method work?
- What are assumptions and uncertainties?

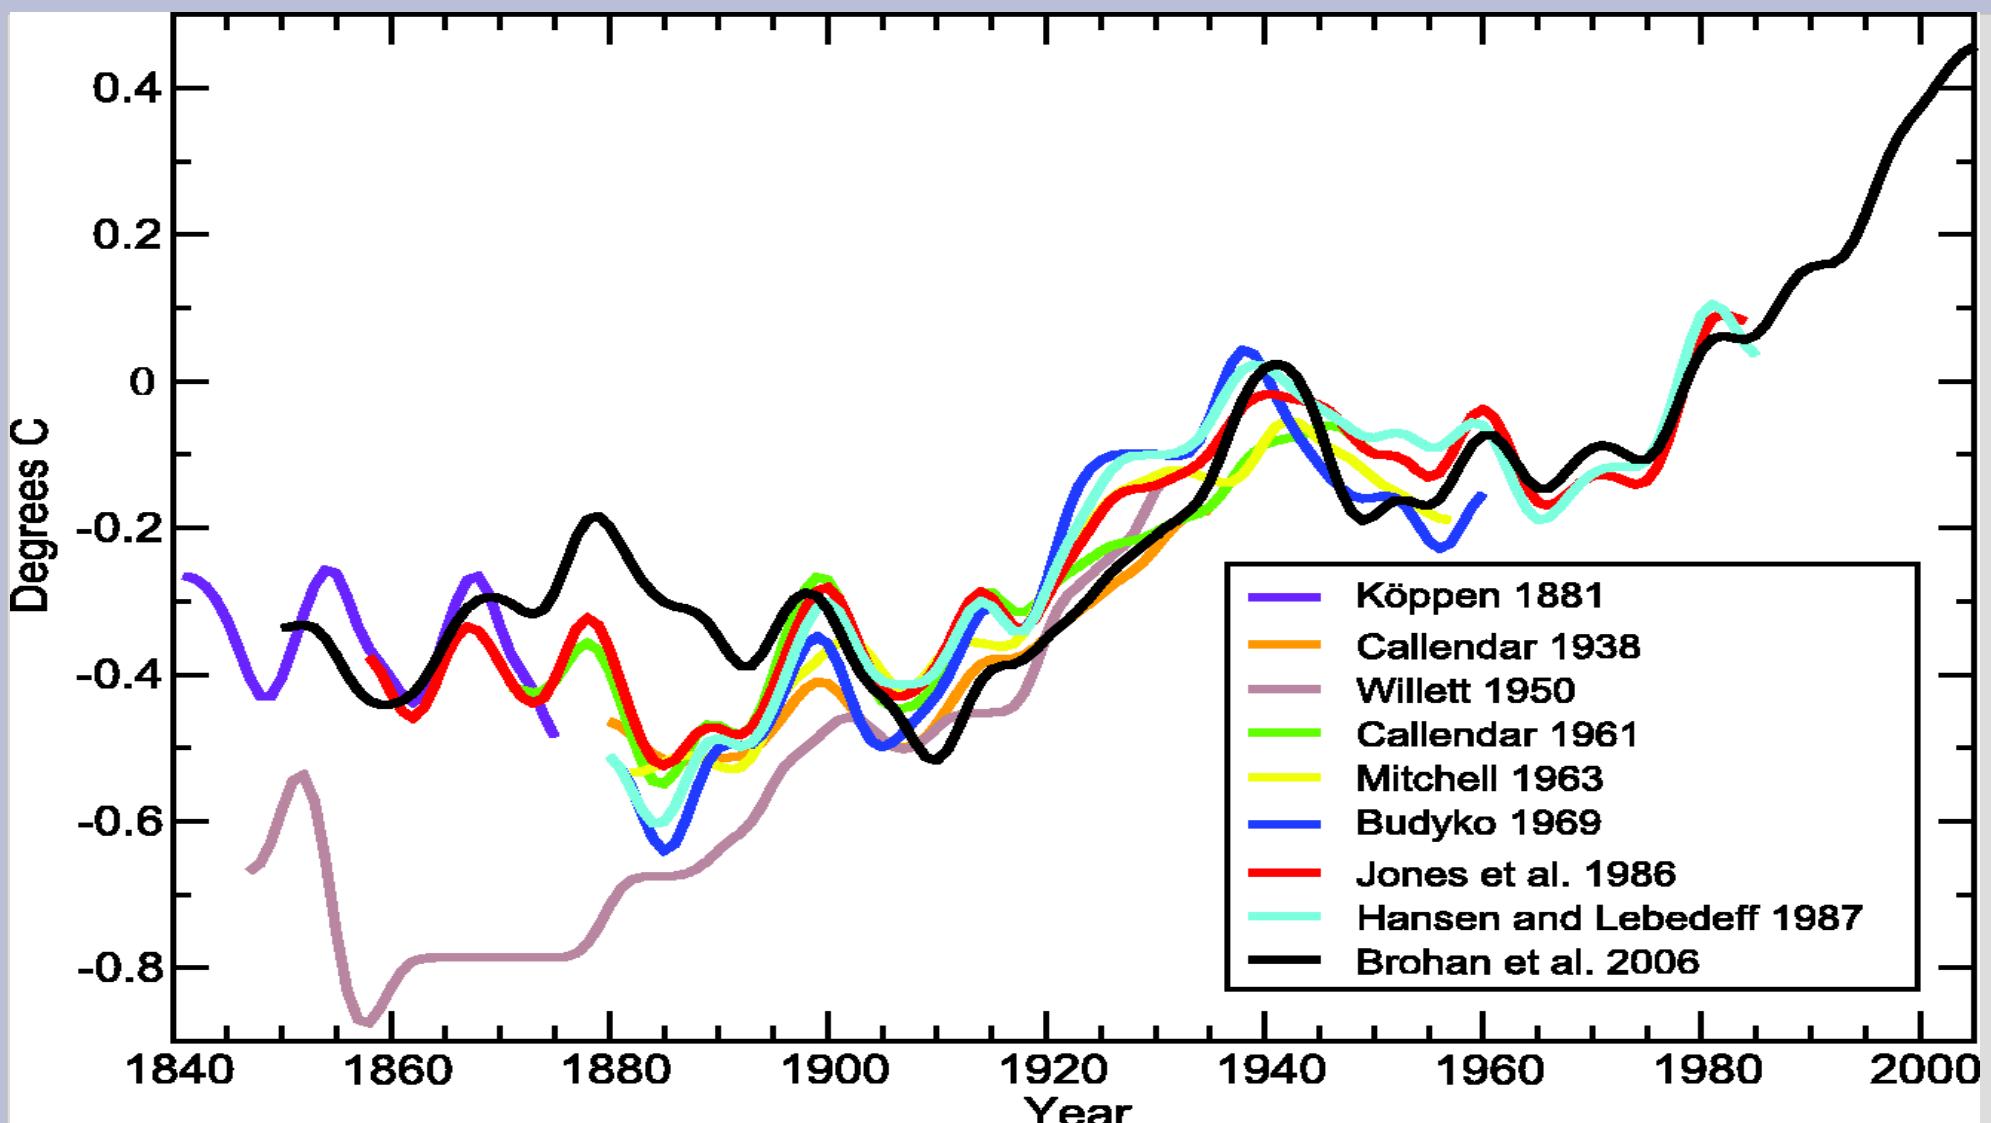

Methods for Climate Reconstruction I

- Instrumental Records
 - Weather stations
 - Ship logs
- Historical Records
- Geomorphological and lithological evidence
 - glacial landforms
 - lake sediments
- Borehole temperature

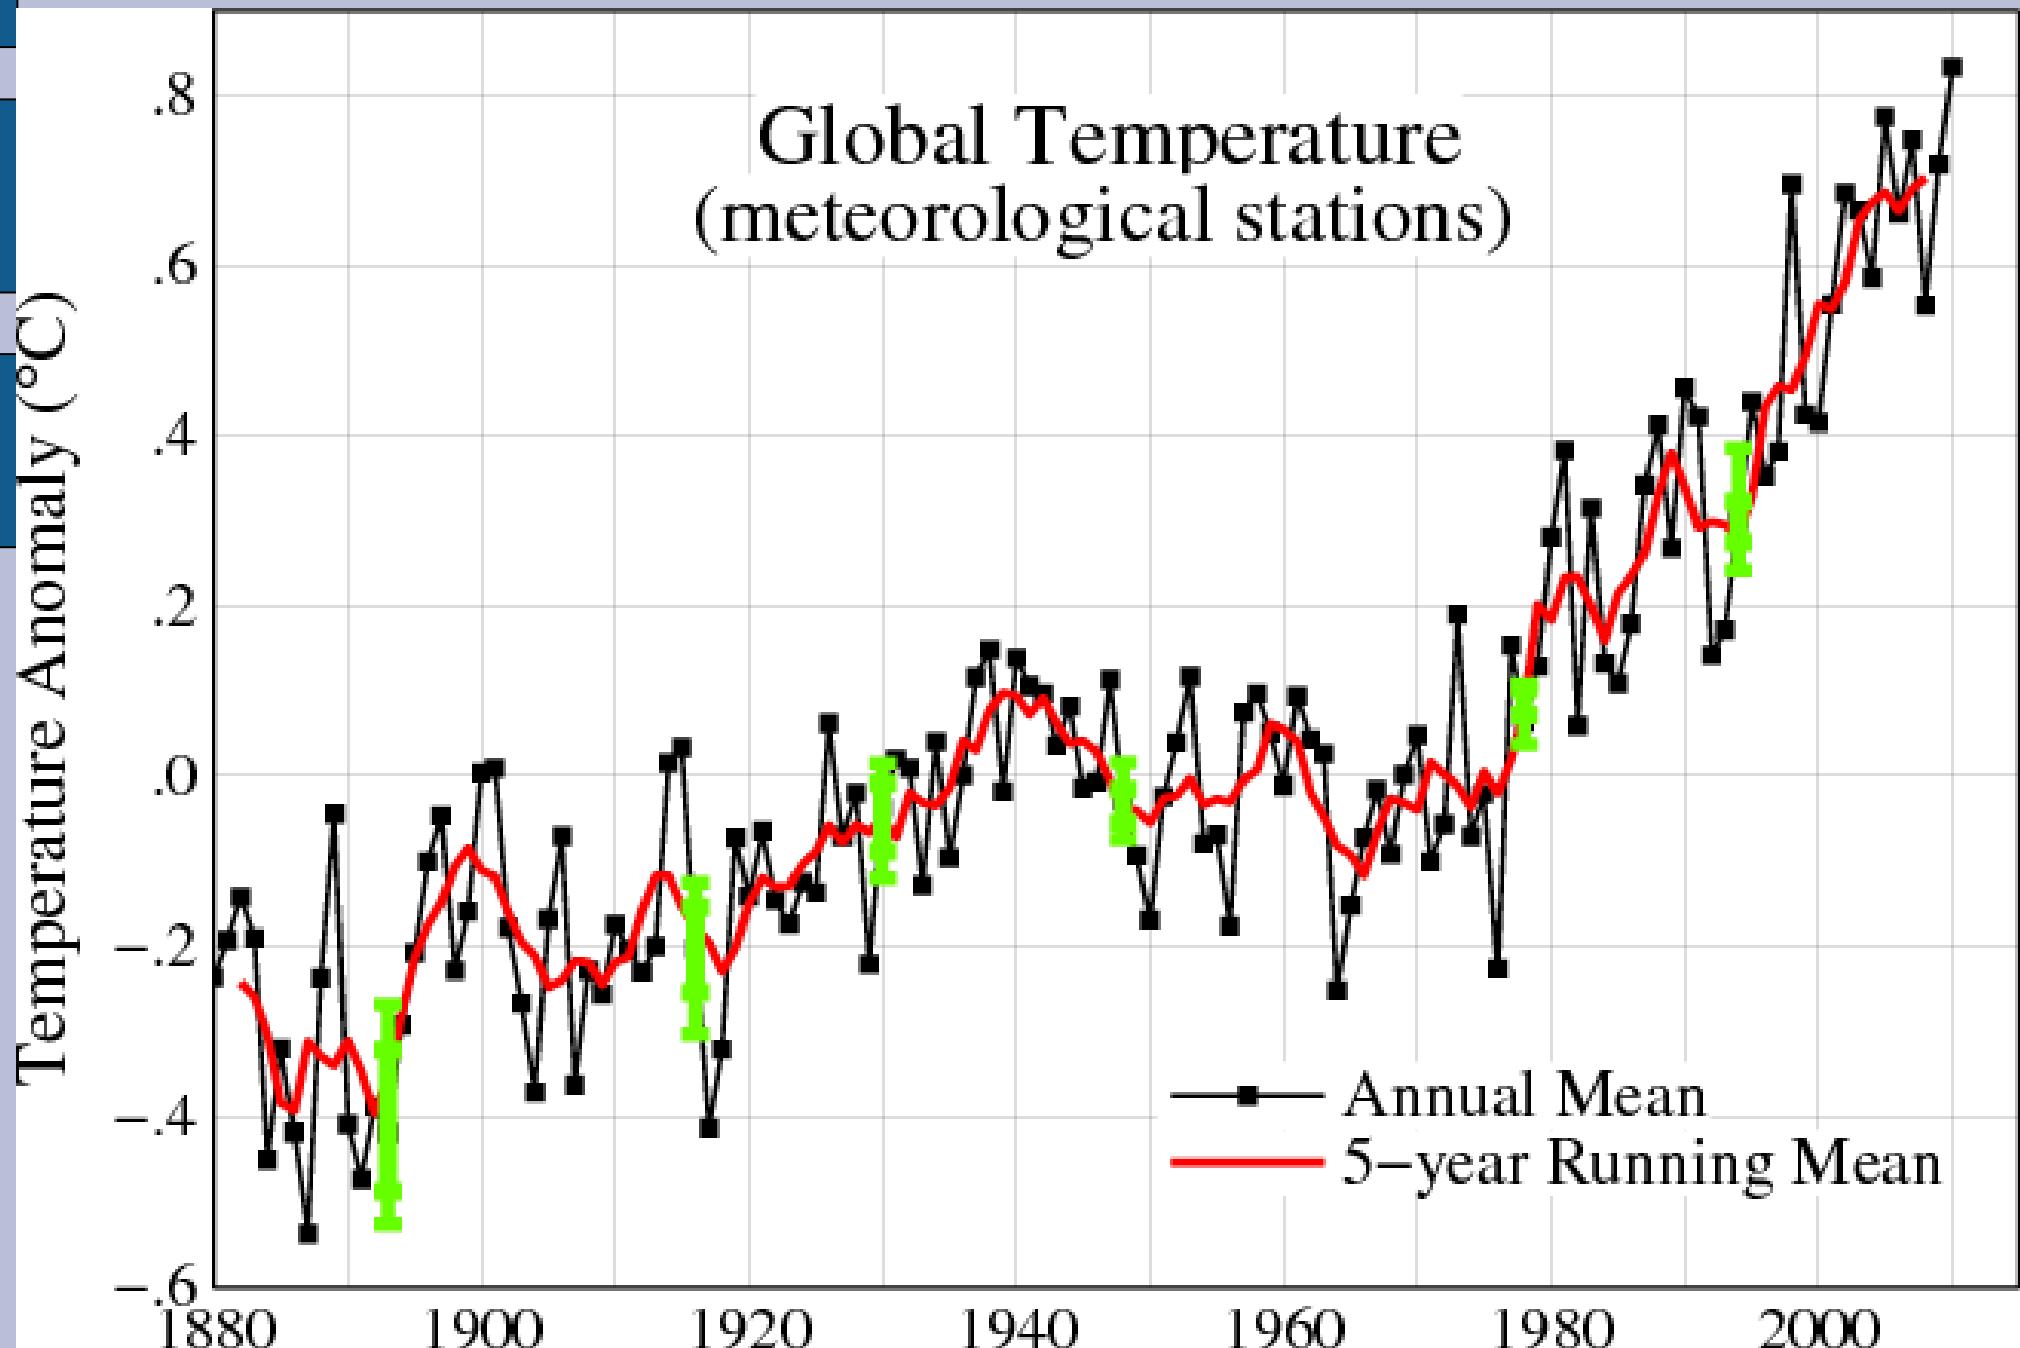

Methods for Climate Reconstruction II

- Biological evidence
 - Tree rings
 - Pollen
 - Macrofossils (also rodents)
 - Insects (particularly in lake sediments)
 - Marine Plancton assemblages (diatoms, foraminifera)
- Geochemistry
 - Isotope methods (oxygen isotope)
 - from ice cores and (marine) sediment cores

Instrumental Records

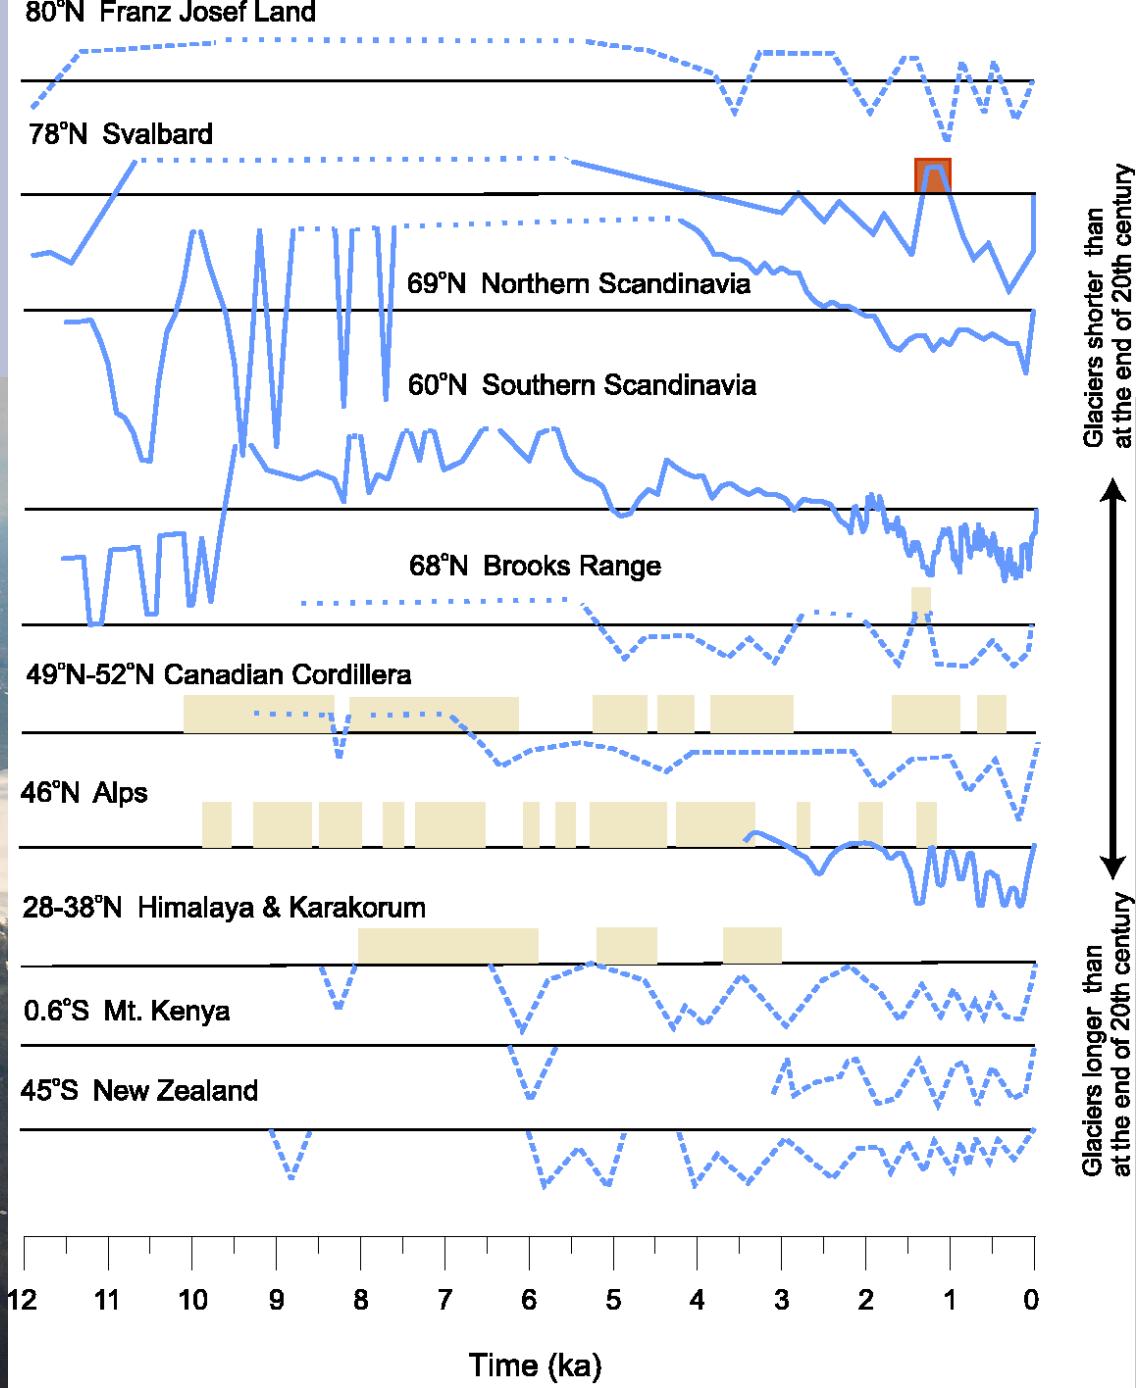

Instrumental Records

Glaciers

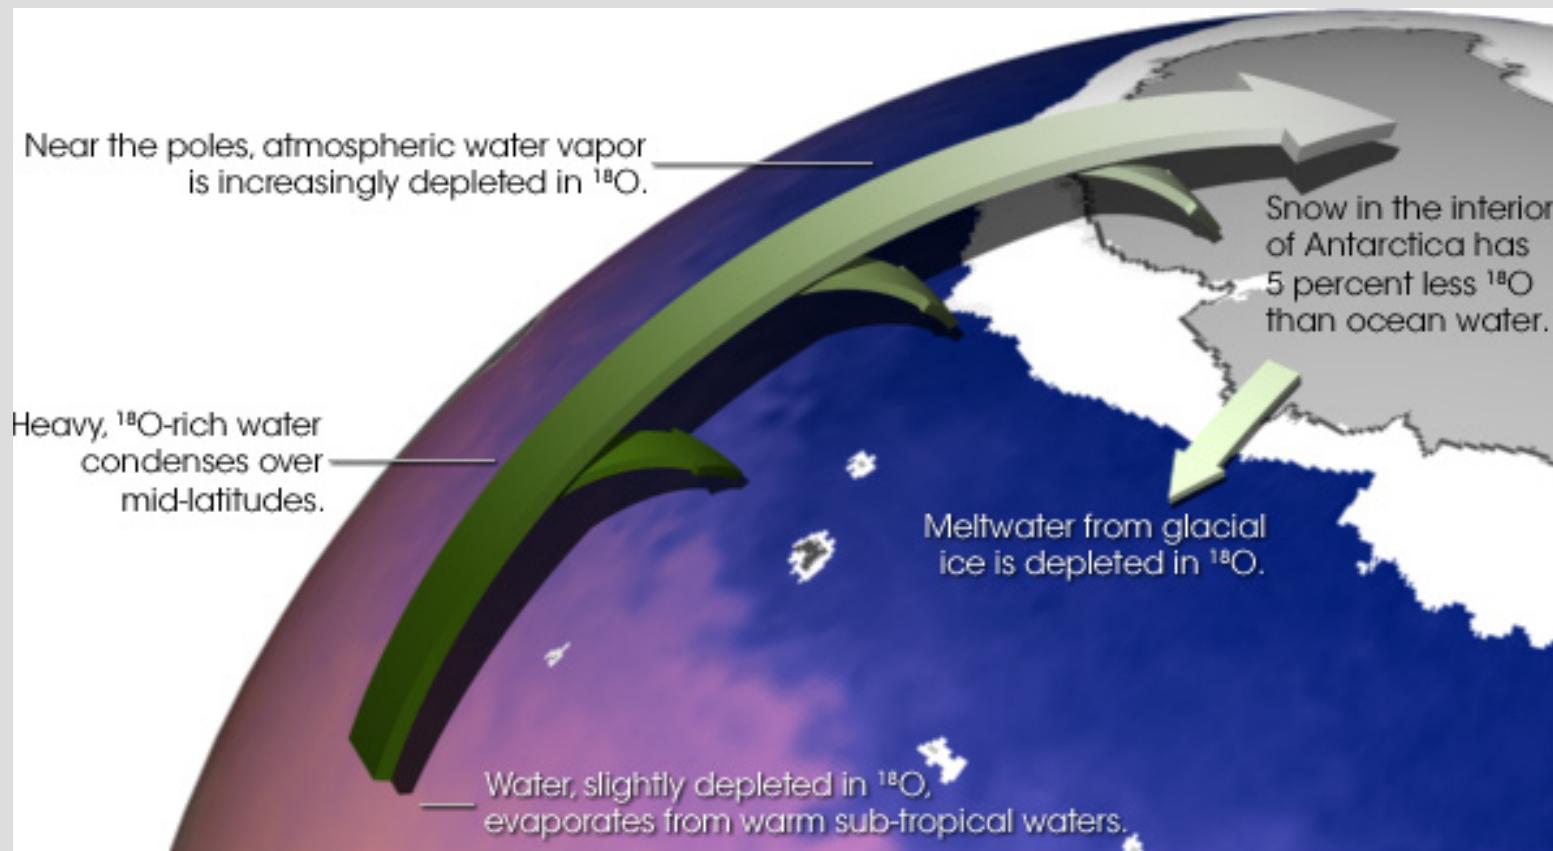

Continuous records Discontinuous records Unknown extent of retreated glaciers

Retreated glaciers: Direct evidence (organic material buried under glacier)

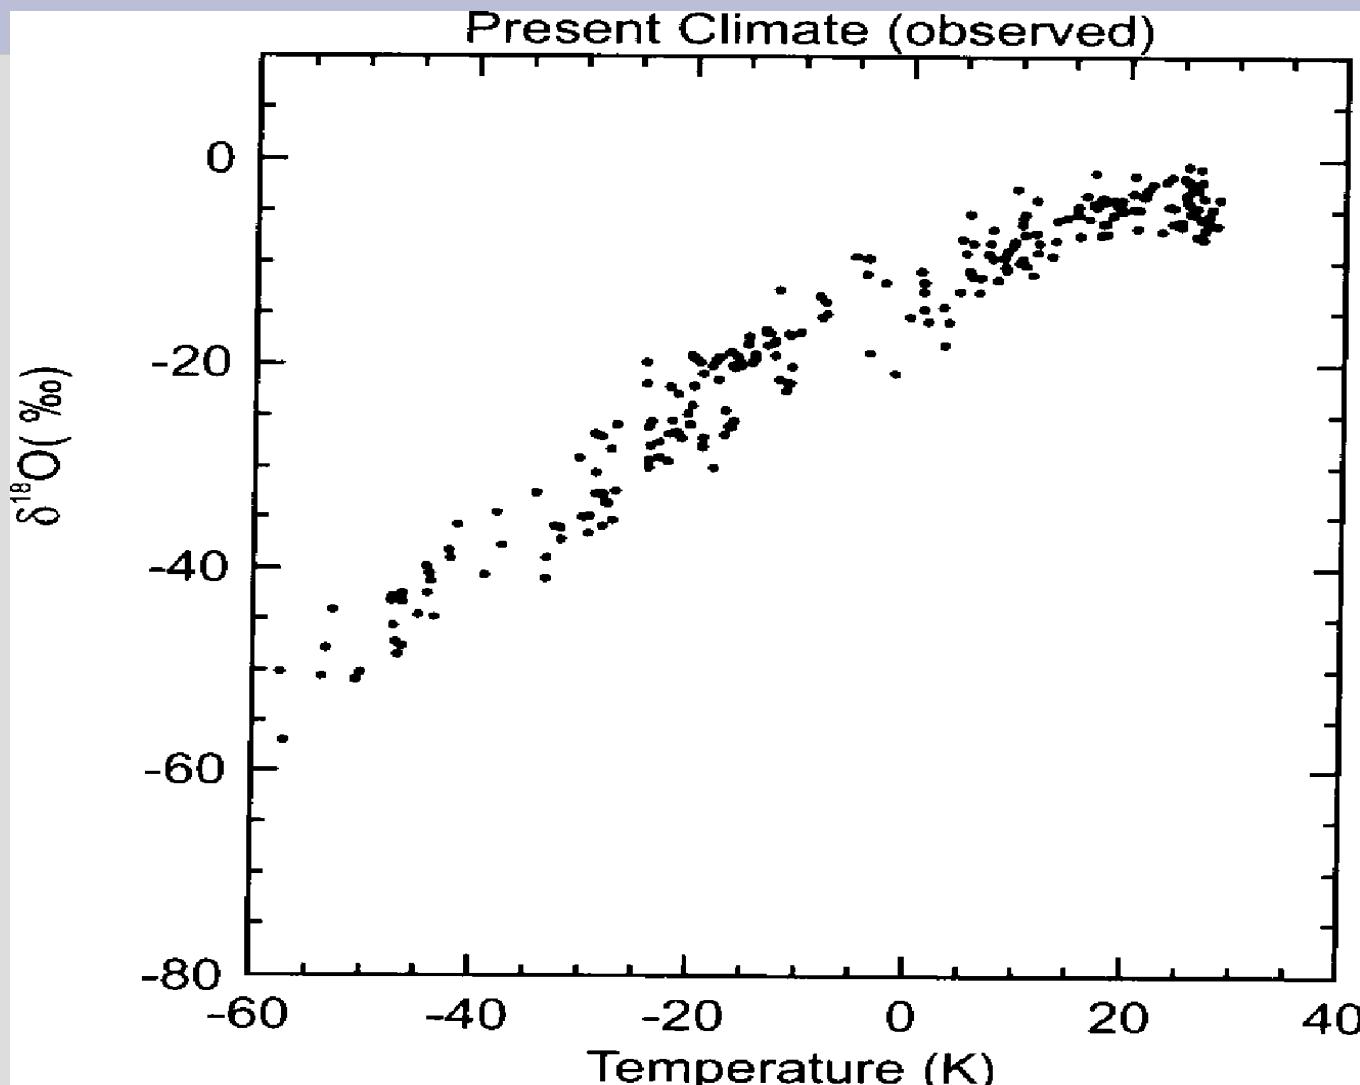

Indirect evidence (wood upper the modern tree limit, buried soils etc.)

Oxygen isotope method

- Fractionation (temperature dependent:
more fractionation at lower temperatures)
- Isotopes bound in ice sheets change global distribution

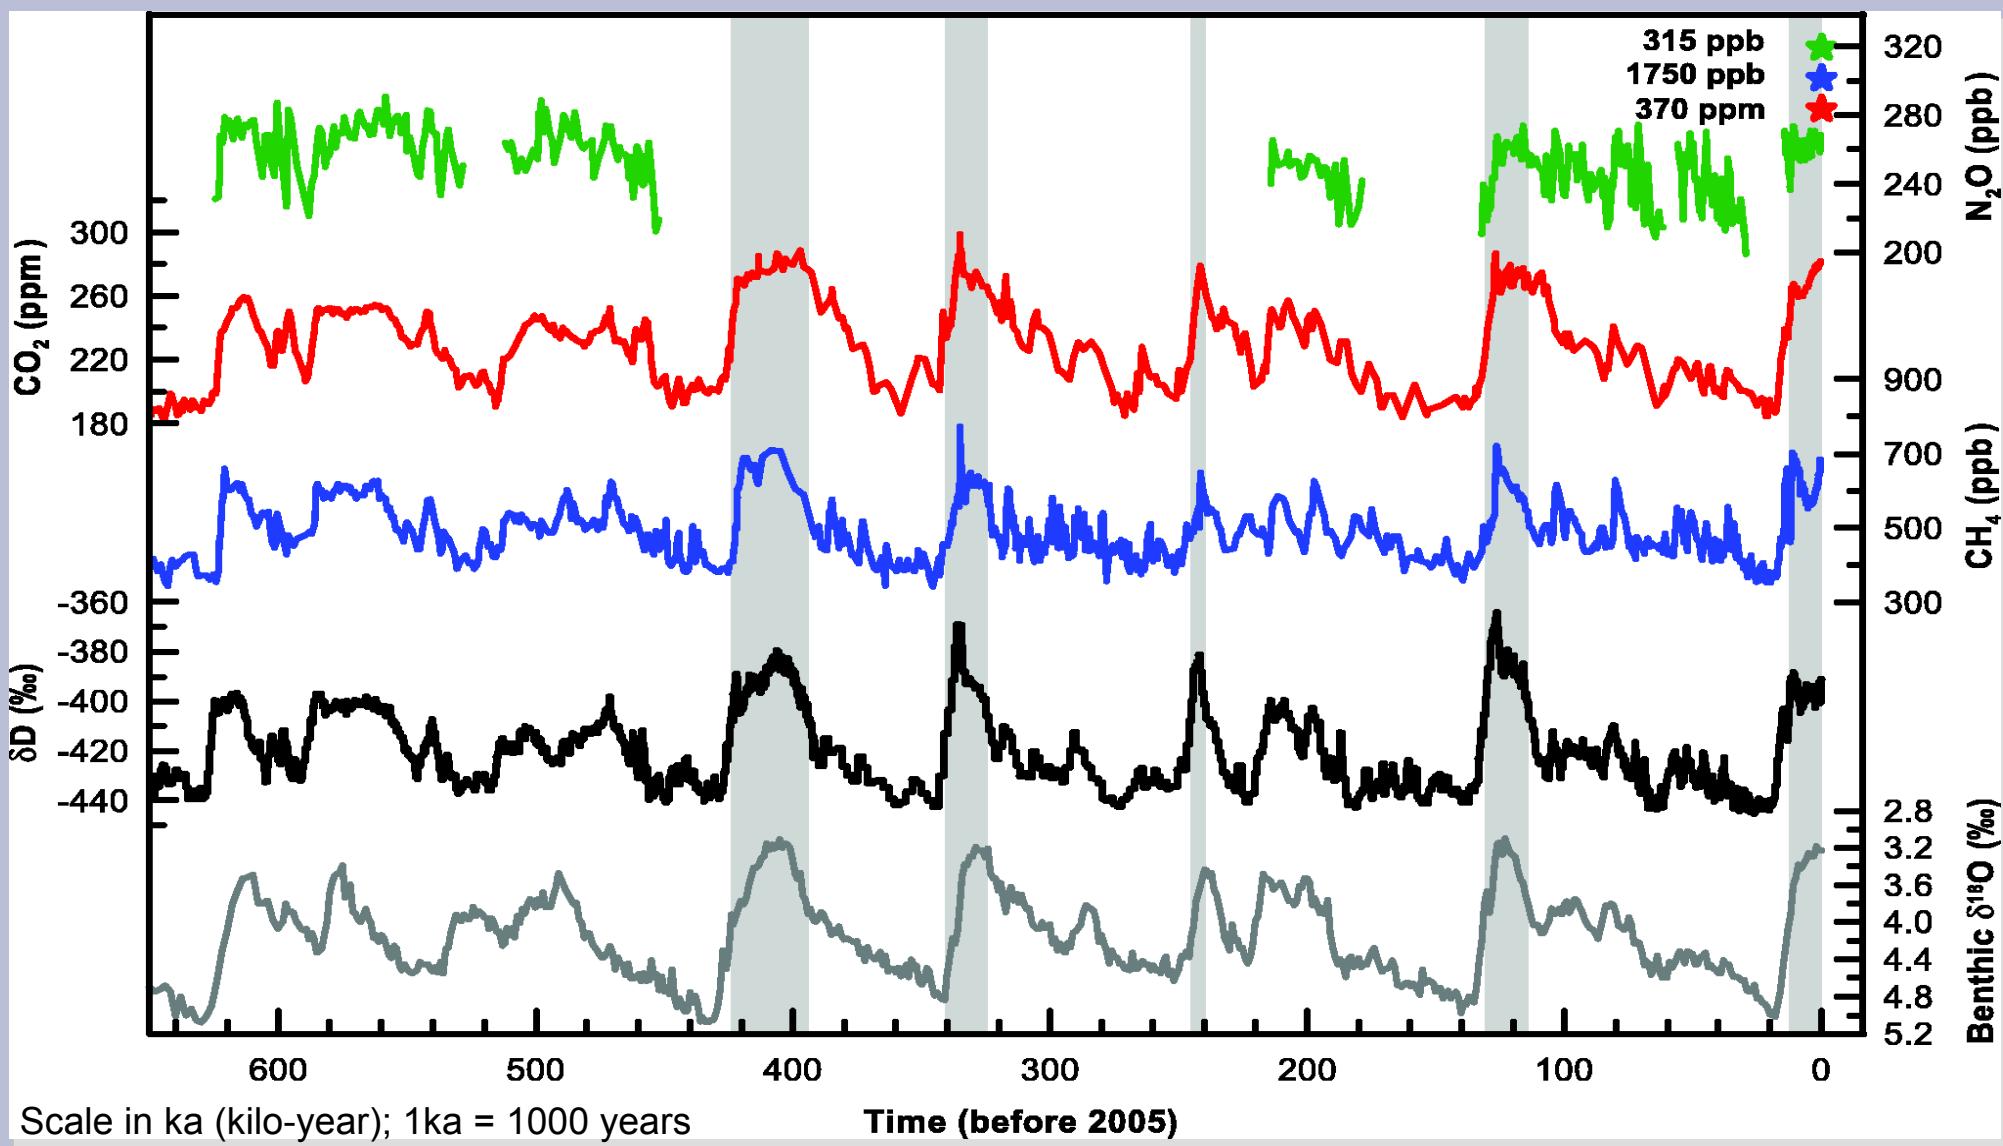

Oxygen isotope method

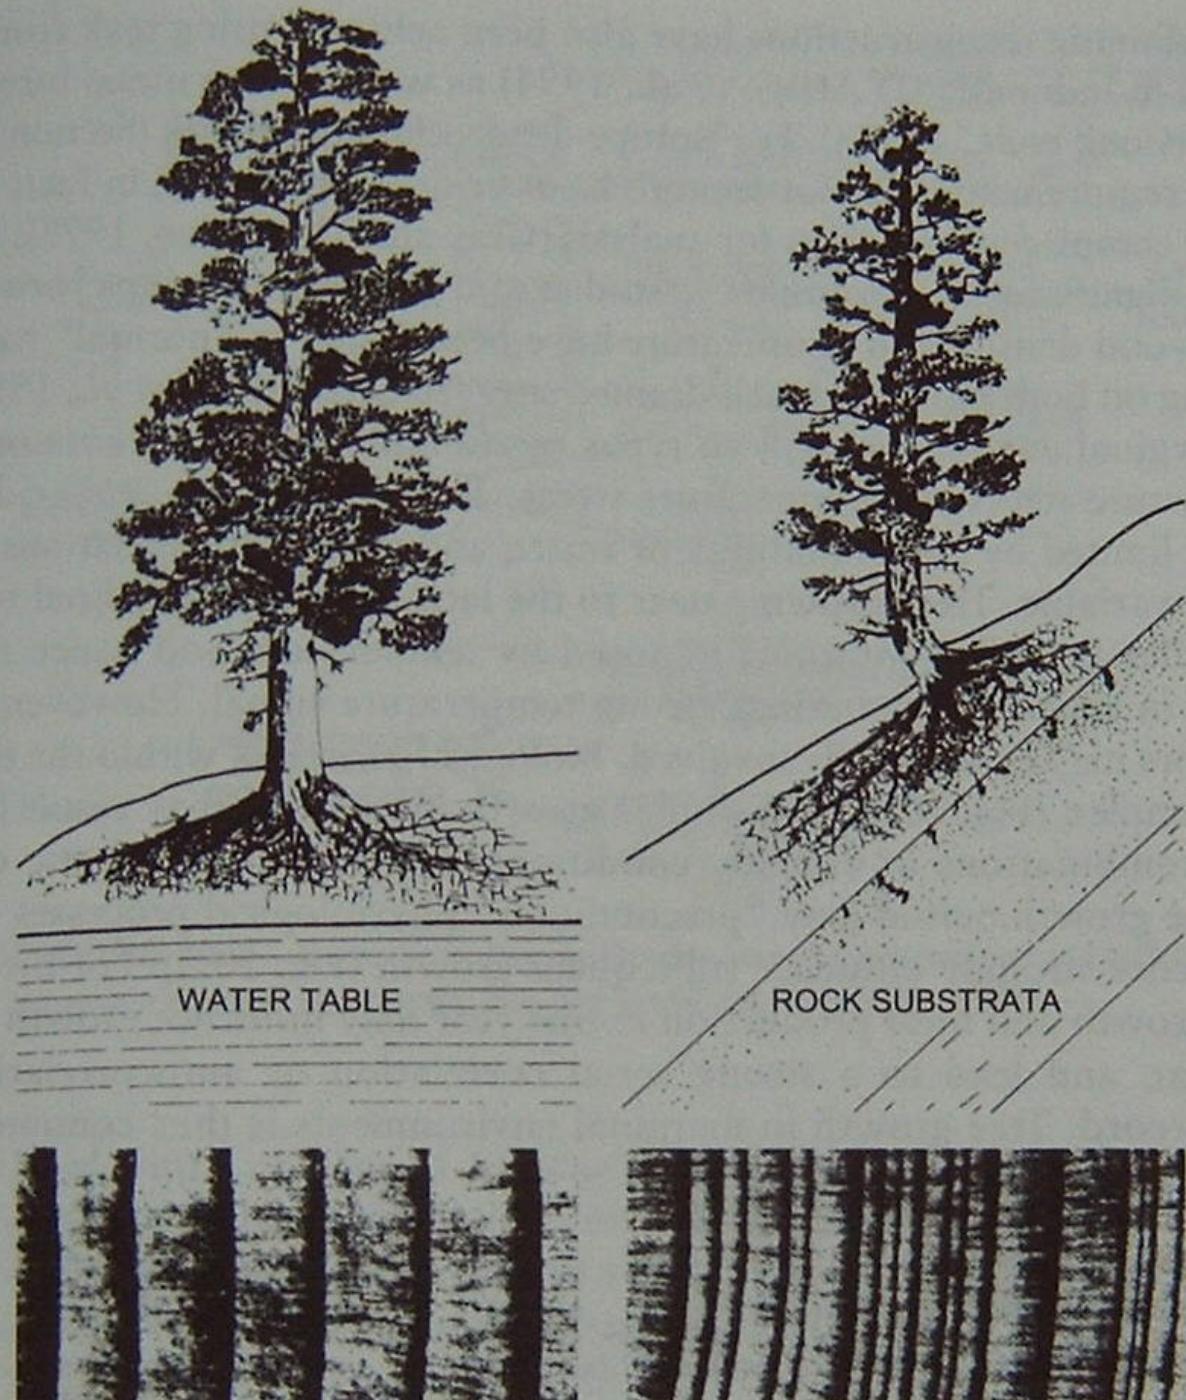

Relation between oxygen isotope ratio in snow and mean annual temperature at the same site (from Bradley 1999, p. 134)

Ice Cores

Tree ring (Dendro- climatology)

Rings of uniform width provide little or no record of variations in climate.

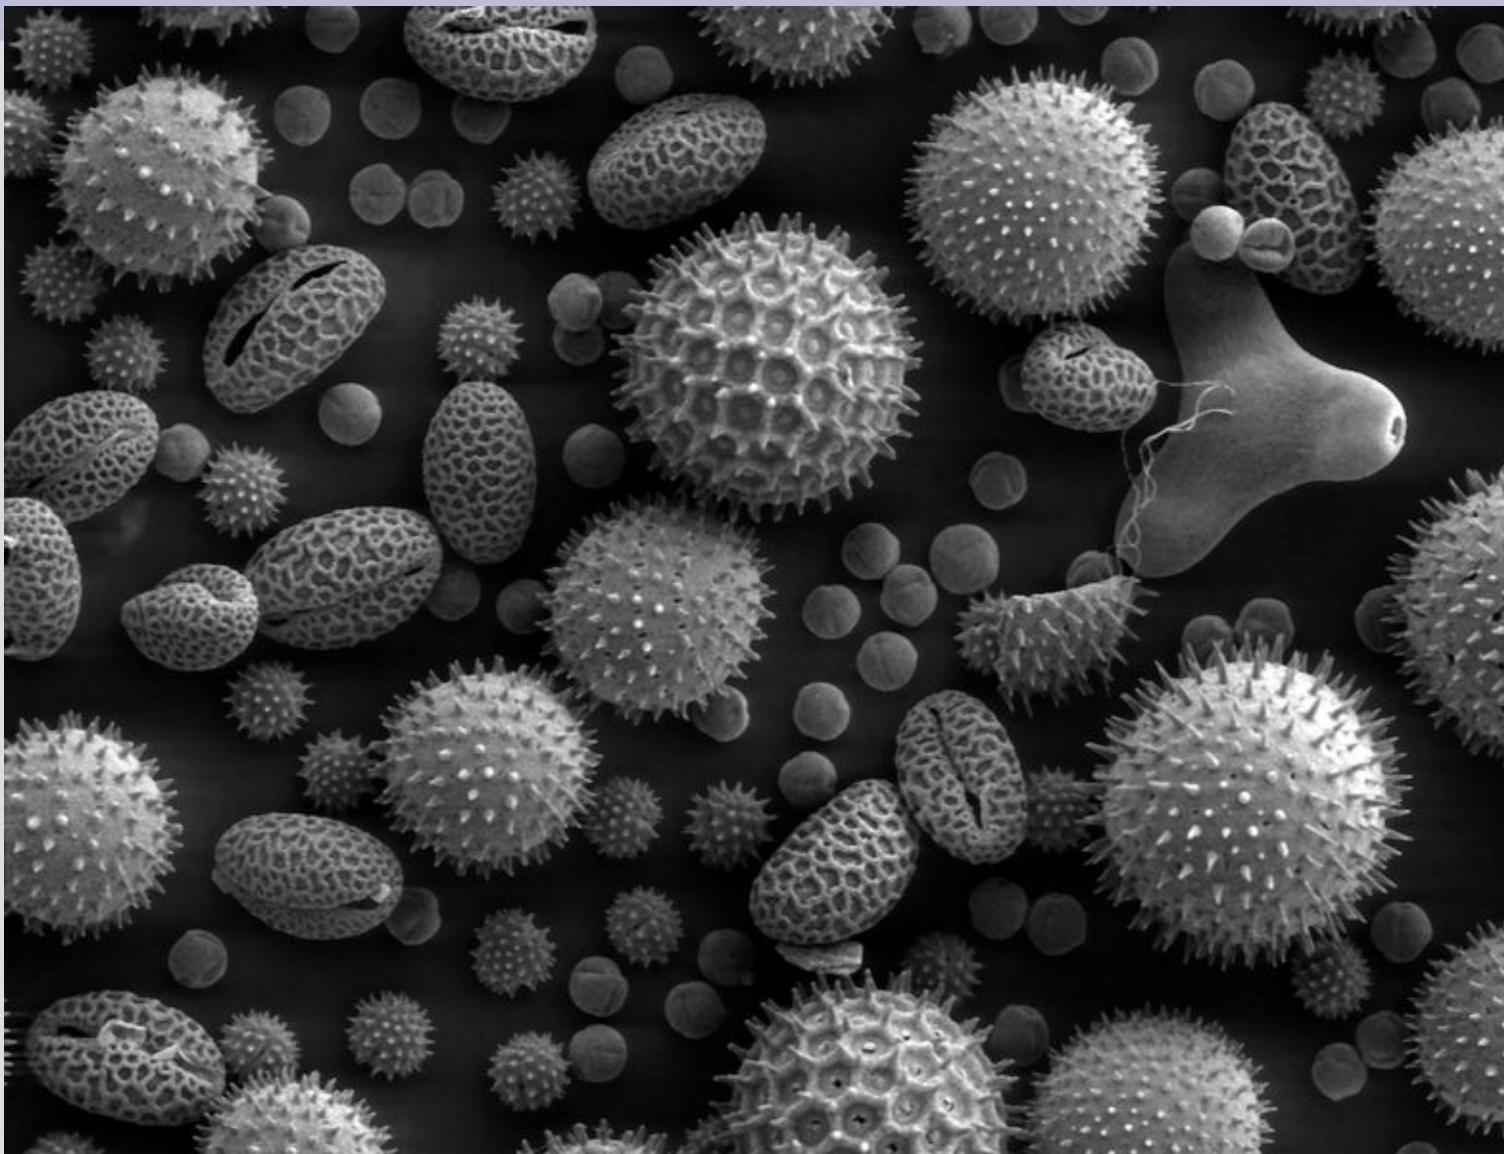

Rings of varying width provide a record of variations in climate.

Tree ring data (Dendroclimatology)

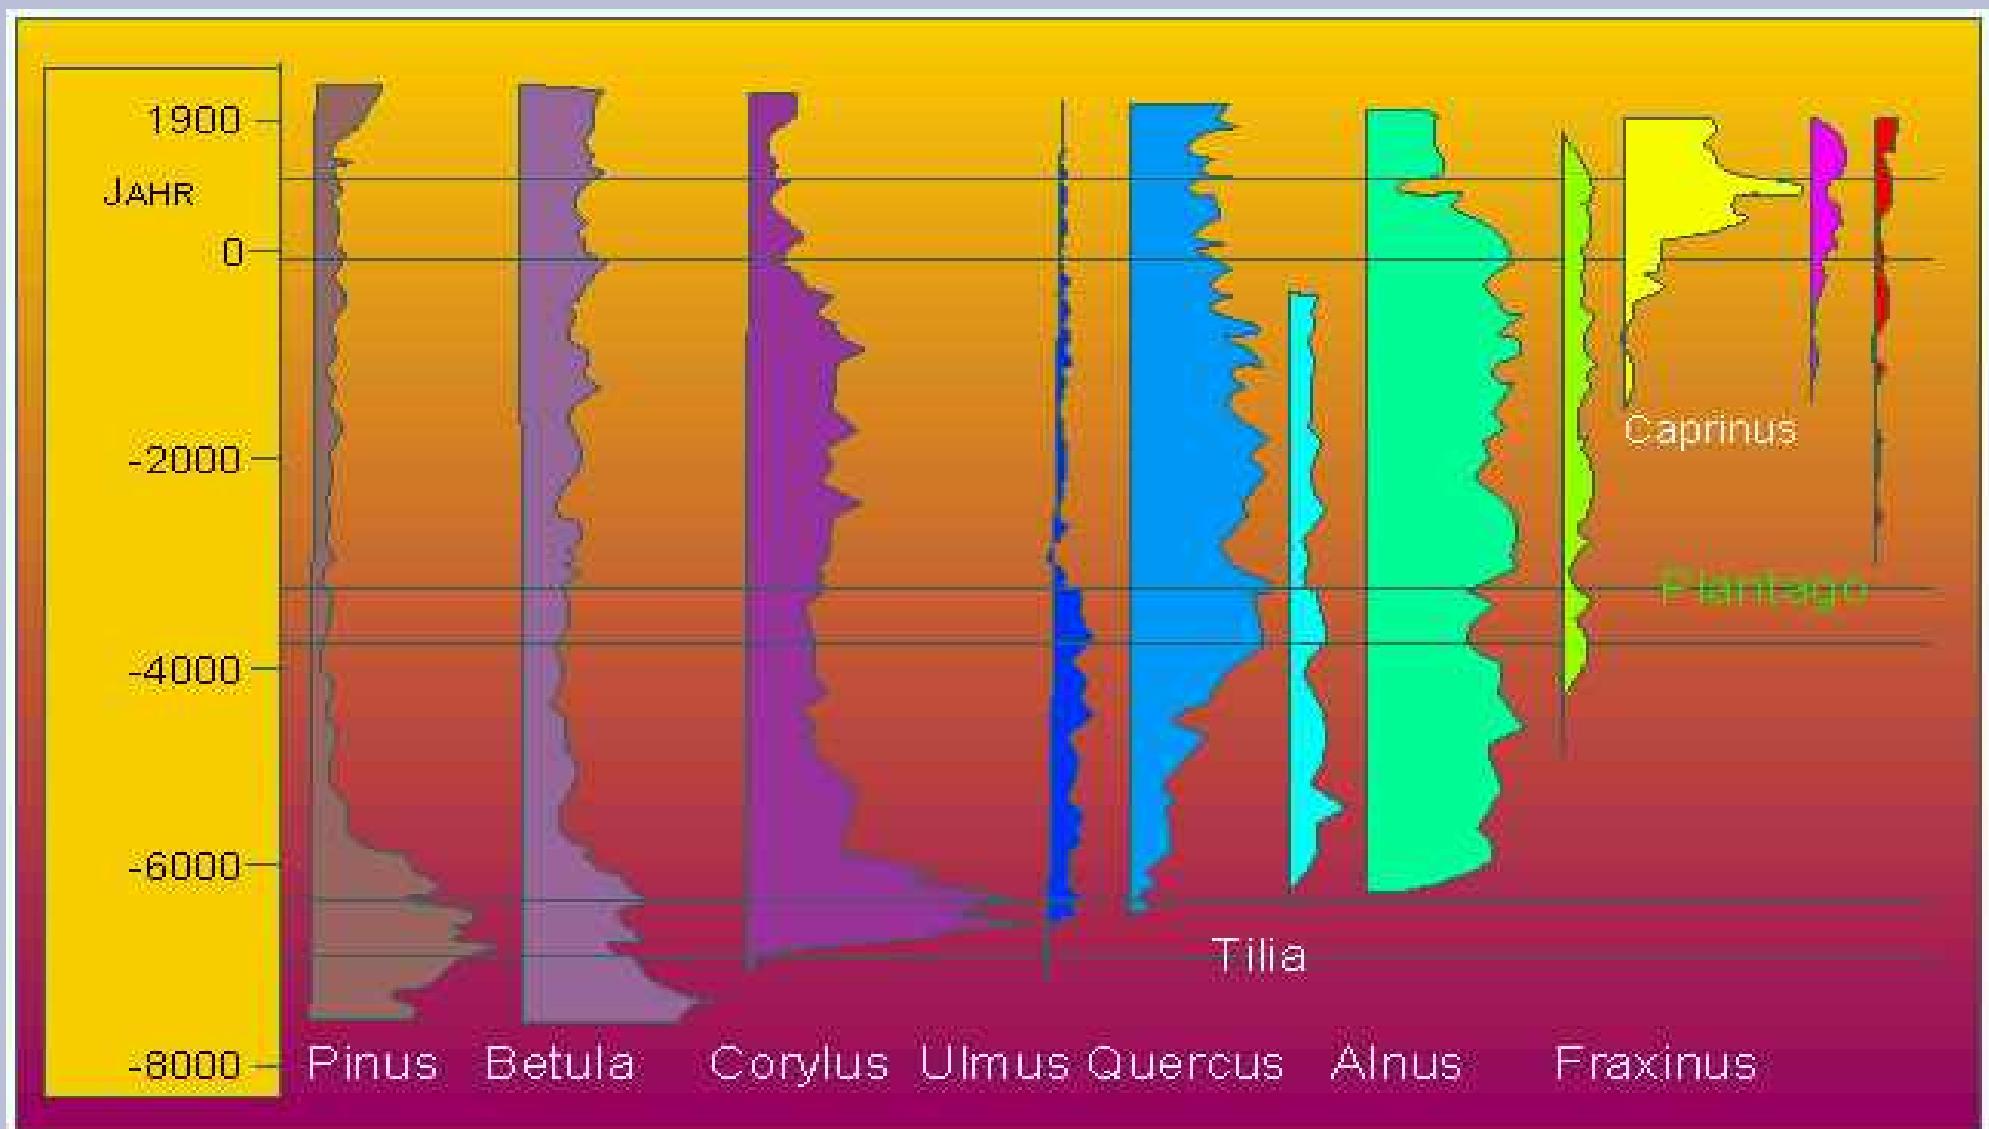

Confounding factors:

- Climate factors
 - Temperature
 - Precipitation
 - Sunlight
 - Wind
- Soil
- Tree age
- Disease, Disturbances, herbivore impact

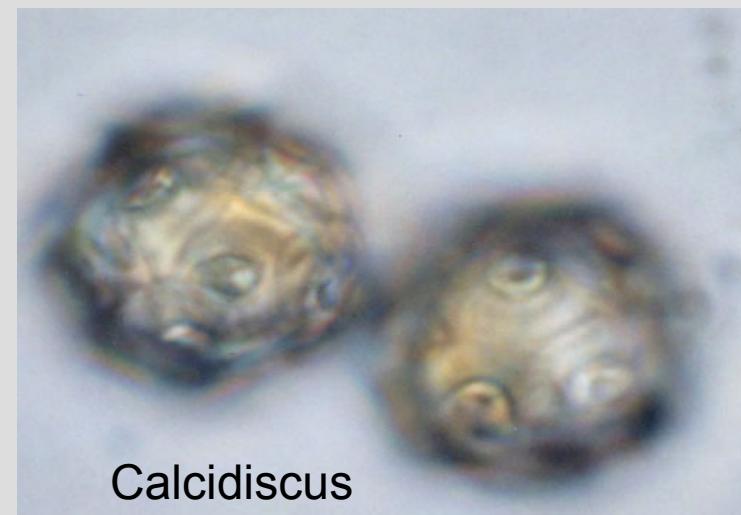

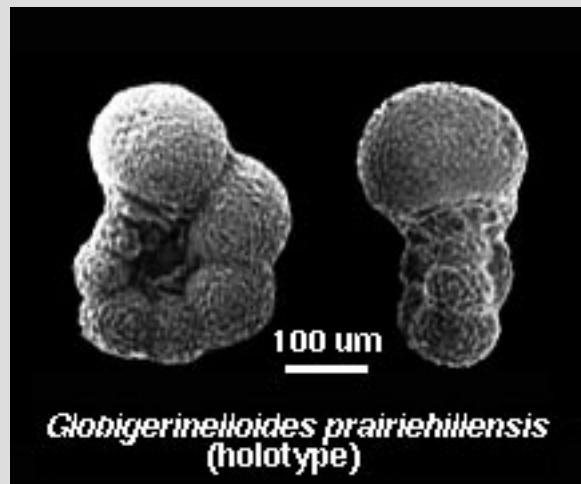

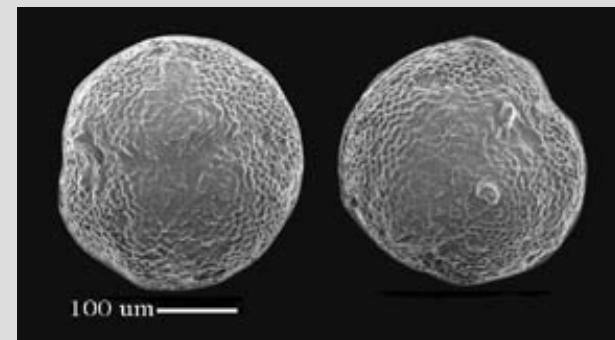

Palynology (pollen analysis)

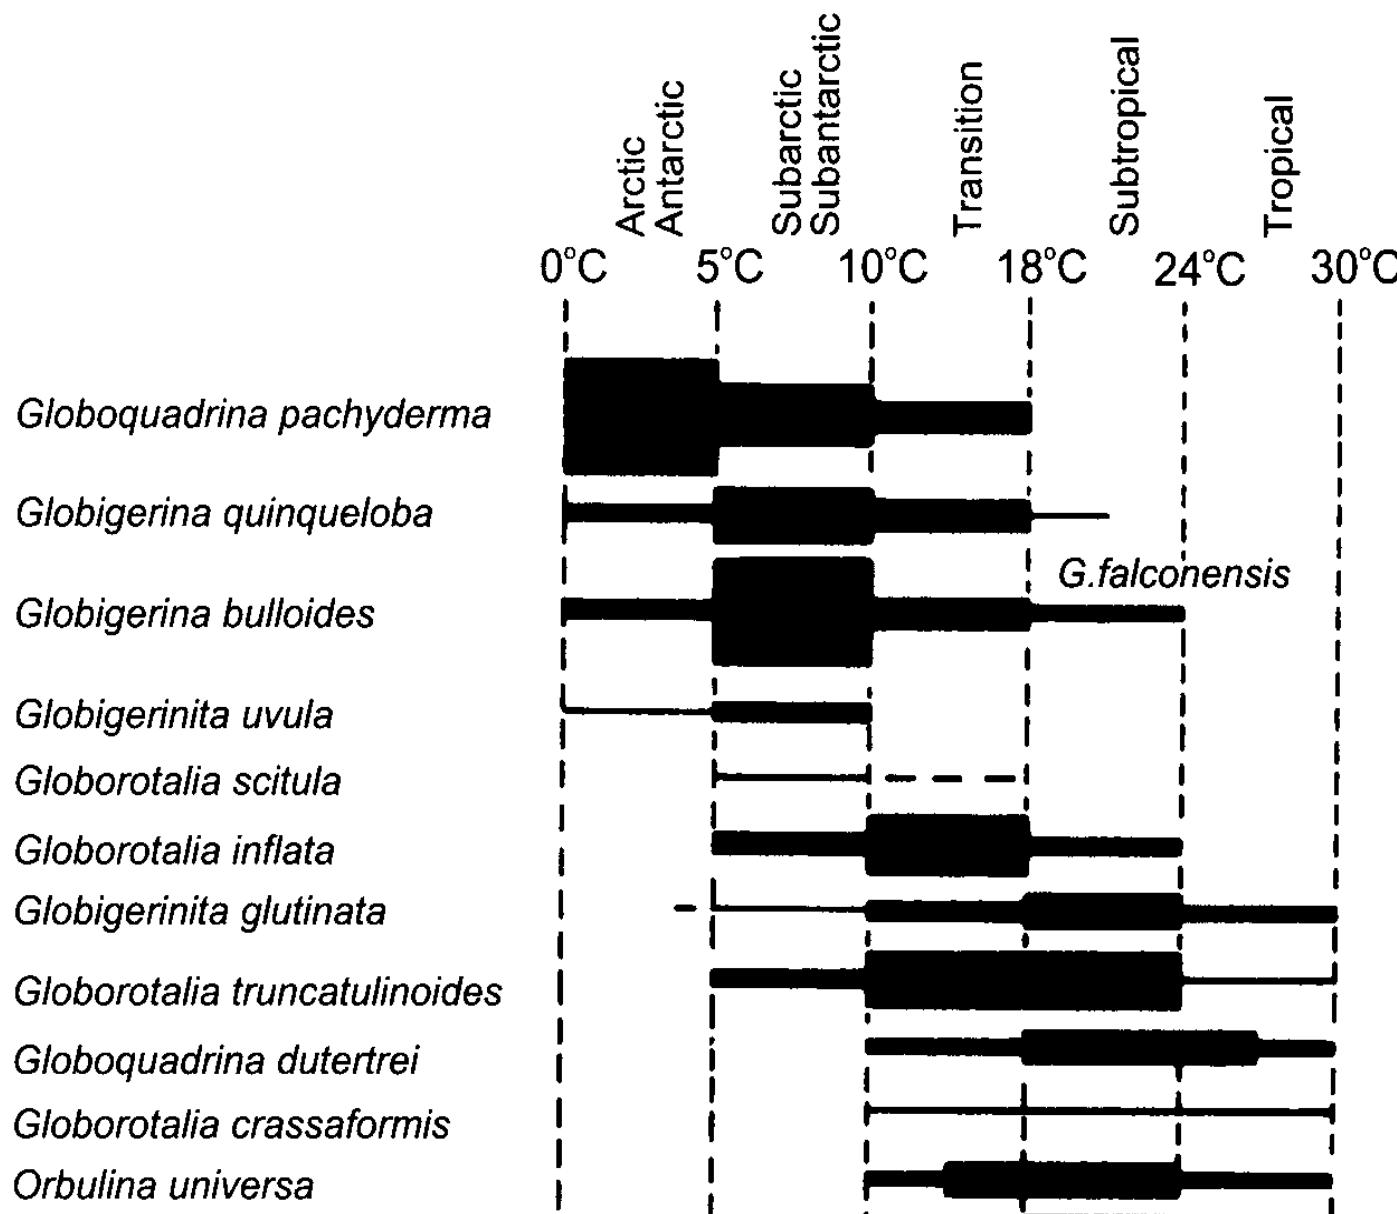

Palynology (pollen analysis)

Plancton faunal assemblages

Plancton assemblages

Ocean drilling

Drilling for sediment cores

Sediment cores

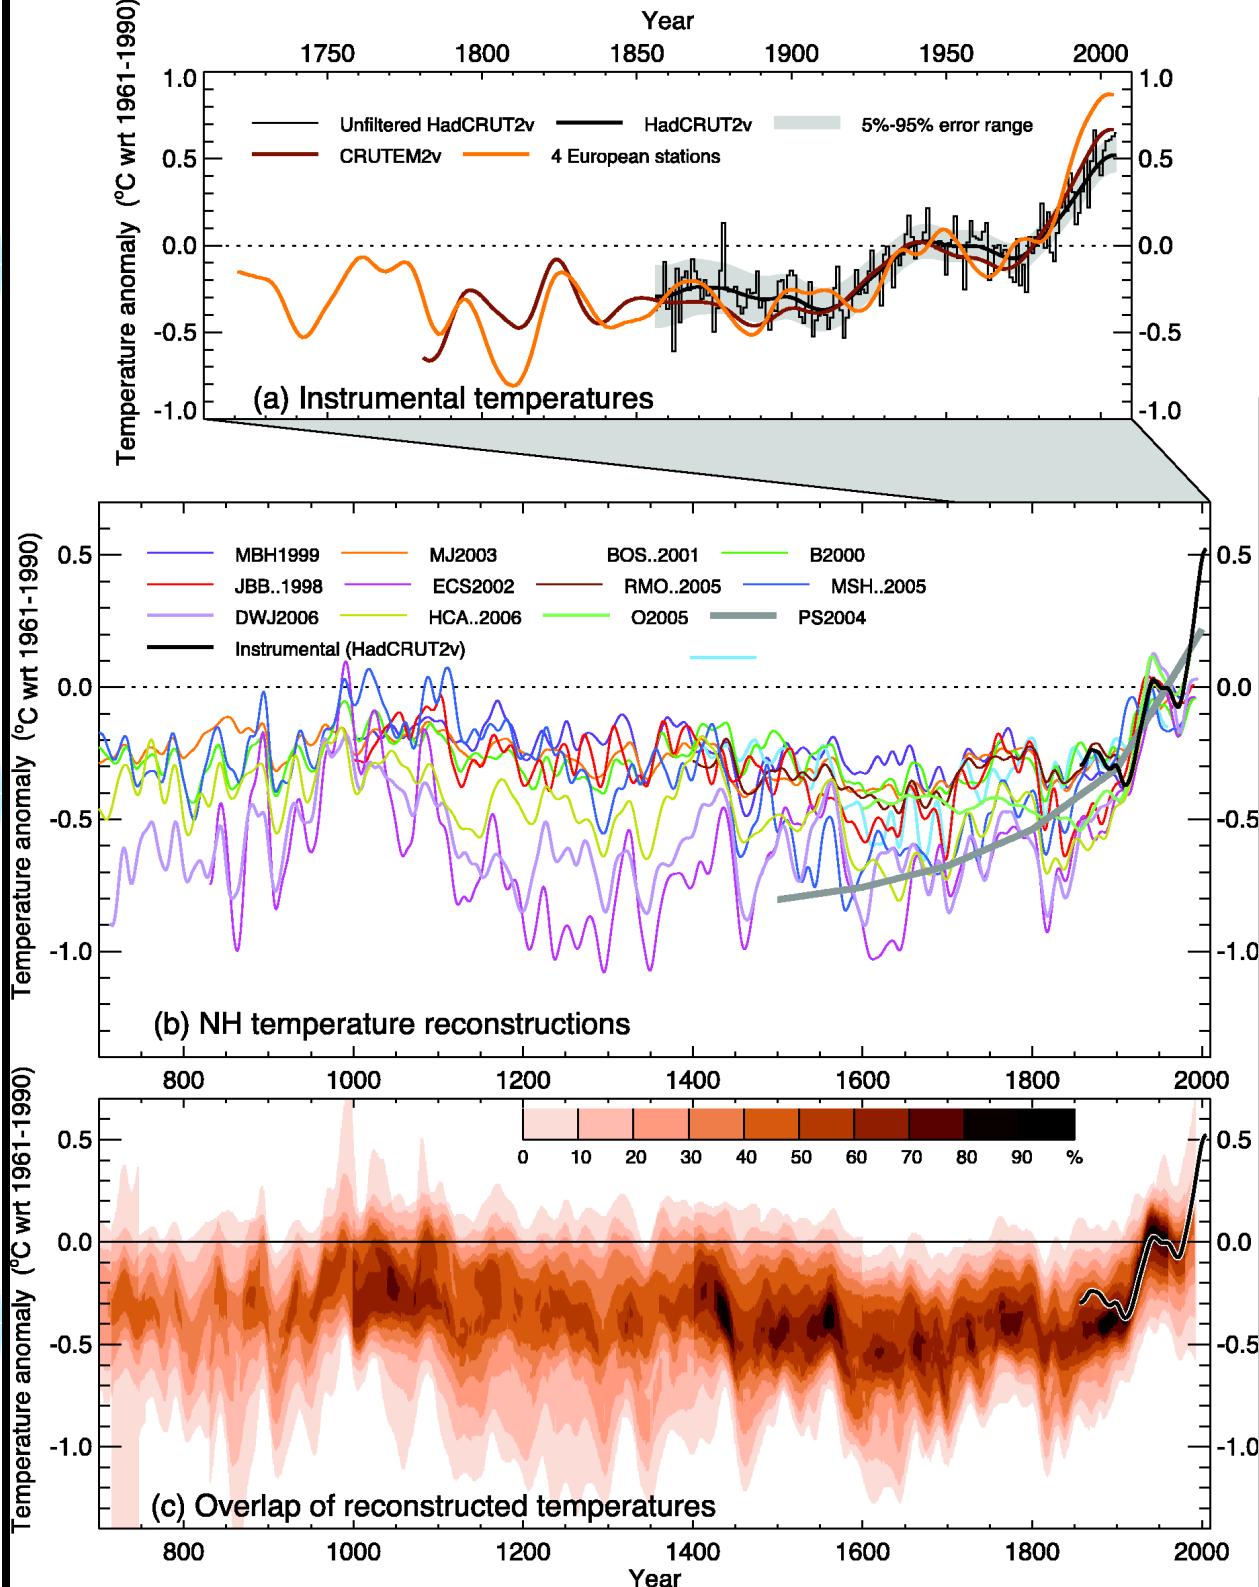

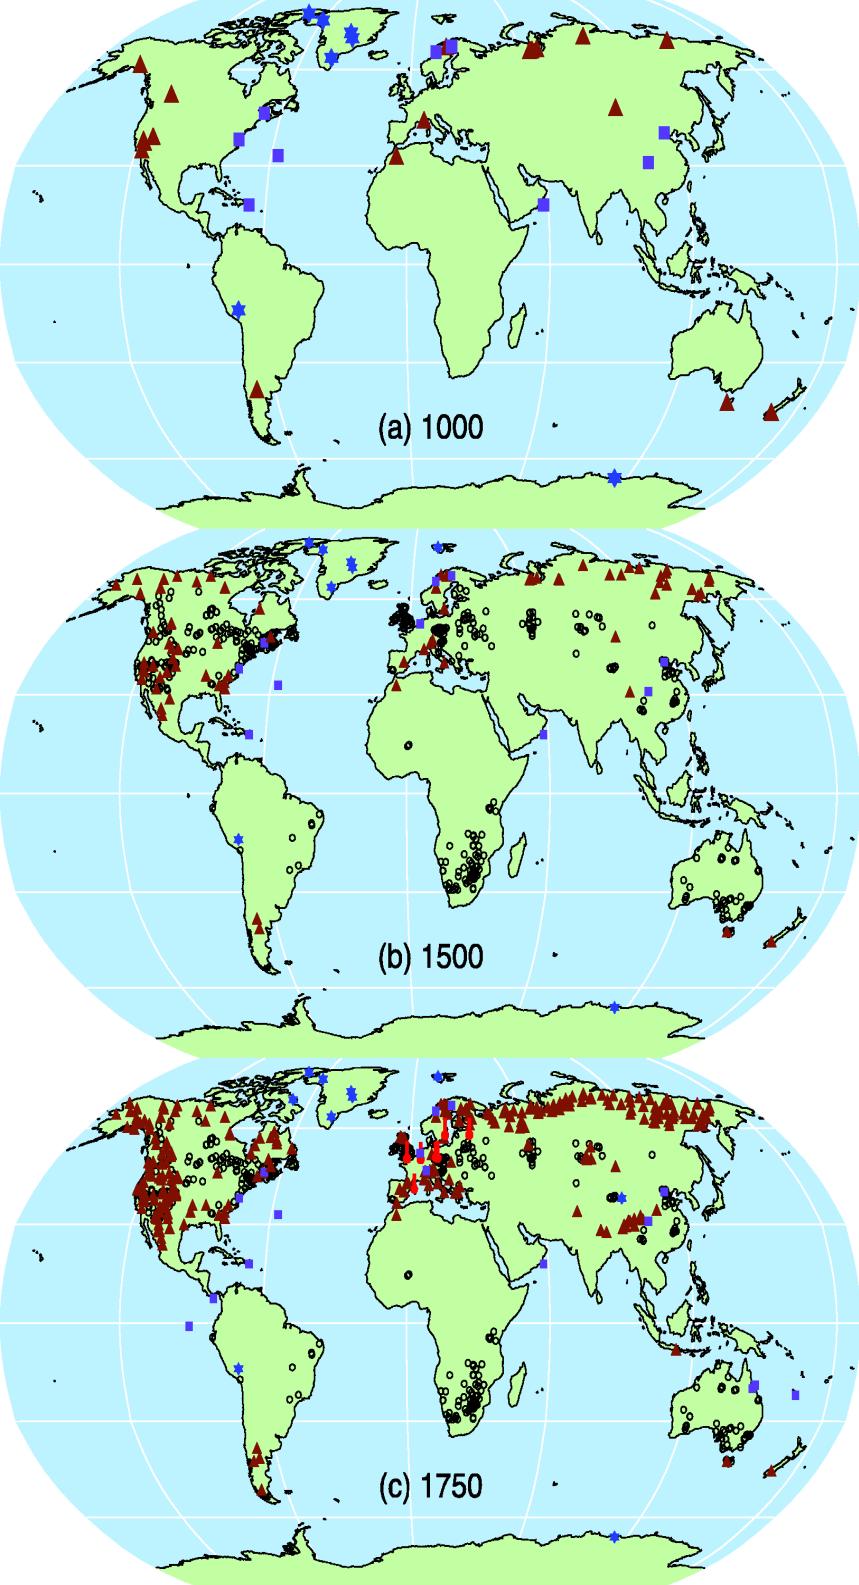

Analysing the sediment core

Climate Reconstruction

- 1000 years
- Multi-proxy:
 - Instrumental (red)
 - Tree rings (brown triangles)
 - Ice cores (blue stars)
 - Boreholes (black circles)
 - Other (purple squares)

Literature

- IPCC (2007): Fourth Assessment Report.
(available at <http://www.ipcc.ch/>)
- Bradley (1999): Paleoclimatology. Academic Press.
- Lowe, Walker (1997): Reconstructing Quaternary Environments. Longman.
- General reading on weather and climate:
Eyewitness companion “Weather”, Dorling-Kindersley, 2008.
